

Biology Study of Life

Linnaeus and Humans

Linnaeus listed man as having a structure similar to primates. Linnaeus also subcategorized man into what are often called "races": African, Asian, Native American and European, with a negligible emphasis, like most Europeans in his day, on the superiority of Europeans.

There is no dispute, from any source, that Linnaeus was a devoted Christian. He took the scriptures seriously, even if some of his ideas were based more on the culture of his day rather than sound theology or science.

In spite of his shortcomings, Linnaeus recognized all creation as ordered by a Divine plan, whom man is in the unique position of administering over that creation.

Kind vs. Species

The Biblical *kind* is a broader category than the modern *genus* and the terms are not entirely interchangeable. Biblical *kind* generally represent animals that can interbreed with one another.

2. Modern classification

- A. Modern taxonomy classifies life according to physical structure.
- B. Although this type of system was toyed with for many centuries, a Christian biologist named Carolus Linnaeus systematized the living world into distinct categories. His book was called *Systema naturae*.
- C. Linnaeus was greatly influenced by the writings of another biologist, a Christian clergyman named John Ray. Ray's book, *The Wisdom of God Manifested in the Works of the Creation*, recognized that similarity in structure was evidence of a common Designer.
- D. Linnaeus also came up with a system of naming all the kinds of organisms. Using a unique Latin two-name identifier for every species, every animal and plant in the world has a unique name. Latin is an effective language for classification because it is a "dead" language. It is no longer in use by any culture and therefore it never changes.

Linnaeus' Categories

Kingdom ► The largest category like animal or plant. Currently there are 5 kingdoms.*

Phylum ► Greek for tribe. mollusks, arthropods and echinoderms are all phylum names. The plant kingdom used *division* in place of *phylum*.

Class ► Osteichthyes, chondrichthyes and reptiles are all class names.

Order ► Things like orthopteres, lepidopteres, marsupials, rodents and carnivores.

Family ► Family distinctions are the least familiar of the groupings.

Genus ► related to our word *genie*. The genus provides the first of Linnaeus' two-name label.

Species ► related to our word *genie*. This provides the second name of the "binomial" label.

ca Restless Classifications. Scientists are always toying with classification systems and there are constant additions of subclasses, subphylum, super-orders. They've suggested an eight kingdom system, an eleven kingdom system, a two kingdom system again or even scrapping the whole thing for something else. No better system has yet emerged to replace it.

* Plantae, Animalia, Fungi, Protista and Monera (includes bacteria)
