Nutrition and Cardiovascular Health Paramjit S. Tappia, Heather Blewett, 2020-06-17 There is unequivocal experimental epidemiological and clinical evidence demonstrating a correlation between diet and increased risk of cardiovascular disease CVD While nutritionally poor diets can have a significant negative impact on cardiovascular health dietary interventions with specific nutrients and or functional foods are considered cost effective and efficient components of prevention strategies It has been estimated that nutritional factors may be responsible for approximately 40% of all CVD Indeed in one of the seminal studies conducted on modifiable risk factors and heart health the INTERHEART study 90% of all myocardial infarctions were attributed to preventable environmental factors with nutrition identified as one of the important determinants of CVD There is an increasing public interest in and

scientific investigation into establishing dietary approaches that can be undertaken for the prevention and treatment of CVD This Special Issue provides an insight into the influential role of nutrition and dietary habits on cardiovascular health and disease as well as their mechanisms of therapeutic and preventive action Tuberculosis Vaccines Paulo J.G.

Bettencourt,2025-08-30 Tuberculosis TB is the leading cause of death by an infectious agent worldwide The Bacillus Calmette Gu rin BCG is the only licensed vaccine against TB and the most widely used vaccine in history Since 1921 billions of people have been vaccinated with BCG resulting in a remarkable decline in infant mortality However although BCG s efficacy to prevent TB meningitis and disseminated disease in children is well established its efficacy to prevent infection disease or reactivation in adolescents and adults is variable Therefore novel TB vaccines are urgently needed Recent clinical trials have shown promising results offering hope for the introduction of a new generation of vaccines to replace or boost BCG The book is structured into five sections each providing sequential relevance to understanding the current landscape and future developments in TB vaccines Section 1 introduces TB and the causative agent Mycobacterium tuberculosis Section 2 presents historical perspectives on BCG and TB vaccine candidates Section 3 focuses on pre clinical vaccines against TB Section 4 examines vaccines against TB currently in clinical trials Finally section 5 discusses public health and societal challenges associated with the development of TB vaccines This book is an essential tool for students clinicians and scientists working in the fields of mycobacteriology vaccine immunology vaccine development and TB vaccines and it is anticipated to stimulate future research in TB vaccine development **Heterologous Immunity: Implications and**

Immunopathogenesis and Immune-based Therapy for Selected Autoimmune Disorders Mourad Aribi,2017-03-22 The book Immunopathogenesis and Immune Based Therapy for Selected Autoimmune Disorders is a synthesis work that discusses two main aspects of autoimmunity Immunopathogenesis and therapeutic approaches essentially based on the immunotherapies This book deals with different topics on a number of autoimmune disorders including type 1 diabetes autoimmune cardiomyopathy autoimmunity of gastrointestinal tract systemic sclerosis and myasthenia gravis This book will be useful to clinicians biologists researchers teachers and students who are interested in immunology and immunopathology

The Neuropathogenesis of Mood Disorders Anthony John McClelland,2024-09-23 Neurology does not include study of the limbic system as this is regarded as more relevant to psychiatry Paradoxically psychiatrists receive no education on the anatomy physiology or neuropathology of the limbic system either during their specialist training programs internationally

Their focus is purely on the diagnosis and treatment of mental illness Thus they are unique among the medical specialities in the 21st century The morbidity and mortality of the many millions of patients with mood disorders has remained unchanged for multiple decades as opposed to the progressive advances made in all other medical specialities This is a travesty and a tragedy for a medical specialist discipline Accordingly using advances in immunology radiology and my own personal insights and after considerable research I have discovered the complex neuropathogenesis of mood disorders and how to substantially improve the treatment regimen in order to substantially improve patient outcomes A detailed comprehensive description of the anatomy physiology the neuropathology of the limbic system and the underlying etiology of mood disorders are described in this book It is likely that a team approach using a psychiatrist and an immunologist will be required for patients with bipolar 2 and treatment resistant depression as the use of biological agents are complex and require considerable experience Primary Immunodeficiencies Worldwide Menno C. van Zelm, Antonio
