The Vertebrates Of Seychelles A Field Guide:

The Vertebrates of Seychelles Justin Gerlach, 2008 **Vertebrates of Seychelles** Justin Gerlach, 1999-09-01 **Field Guide to Mammals of Madagascar** Nick Garbutt, 2025-02-27 A comprehensive photographic field guide to Madagascar's stunning mammal fauna. Thanks to millions of years of isolation, the island of Madagascar is home to one of the most remarkable assemblages of mammals on earth. Nowhere else can boast such a combination of species richness and endemism. Field Guide to Mammals of Madagascar covers all native species found on the island, including bats, tenrecs, mice, and lemurs, as well as a small number of introduced non-native species. Detailed species accounts cover description and identification, habitat and distribution, behaviour, and where the best places to see a species might be. A detailed distribution map for each species is also included. Supporting chapters cover the island's regions and habitats, threats to mammals, conservation, and important mammal watching sites. The book is illustrated throughout with exceptional photography, including species rarely photographed previously. Field Guide to Mammals of Madagascar is an essential addition to the backpack of any wildlife watcher visiting this amazing island.

Field Guide to the Birds of Madagascar and the Indian Ocean Islands Roger Safford, Adrian Skerrett, Frank Hawkins, 2019-12-12 This major new field guide covers Madagascar and the Indian Ocean islands, including the Seychelles, Comoros, and Mascarenes, Mauritius, Réunion, and Rodrigues. The Malagasy region contains one of the most extraordinary concentrations of biodiversity in the world. Its recognition as a zoogeographic region in its own right has recently been confirmed, and all taxa combined, the region was found to hold the second most distinct assemblage of vertebrates in the world, after the Australian region, despite being the smallest of them all. This Helm Field Guide covers the whole of the Malagasy region, which comprises the unique island of Madagascar and the various islands and archipelagos of the Indian Ocean, including the Seychelles, Comoros, and Mascarenes, Mauritius, Réunion, and Rodrigues. Every resident and migrant species is covered in full detail, with a colour distribution map for each. Vagrants are also treated in detail, but without maps. All species are illustrated on a beautiful series of 124 colour plates, with artwork from John Gale and Brian Small. Conveniently, the plates have been arranged so that all the key species of the various archipelagos are placed together in sections. This is a major work of reference on the birds of the region and will remain the standard text for many years to come.

Tropical Island Recovery Michael Samways, Peter Hitchins, Dr Orty Bourquin, Dr Jock Henwood, 2010-04-29 Tropical island species and ecosystems are threatened worldwide as a result of increasing human pressure Yet some of these islands also lend themselves to restoration as they are physically defined units that can be given focused attention as long as resources are available and clear conservation targets are set Cousine Island Seychelles is a tropical island that has received such intensive restoration From a highly degraded island in the 1960s the island has now been restored to what is believed to be a semblance of the natural state All alien vertebrates have been eradicated as have 25 invasive alien plants Cultivated plants are now confined to one small section of the island Poaching of nesting marine turtles has been stopped leading to an increase in turtle breeding numbers The shearwater population has increased in size with poaching activities under control The Sooty tern has also returned to the island to breed The coastal plateau has been restored with over 2500 indigenous shrubs and trees which have now grown into a forest carpet There are strict quarantine procedures on the island keeping it free of rats mice various alien invertebrates and potentially invasive alien plants Three threatened Seychelles endemic land birds Seychelles warbler Seychelles magpie robin and Seychelles white eye have been introduced and are thriving with these introductions contributing to both the magpie robin and the white eye being downgraded from CR to EN the warbler remains at VU Ecotourism and nature conservation for the local inhabitants have been introduced in a way that does not reduce the improved compositional structural and functional biodiversity of the island The result of the restoration effort appears to be sustainable in the long term although challenges still remain especially with regards to adequate clean water and a non polluting power supply on the island Cousine is thus paving the way in the art and science of tropical island restoration as a legacy for future generations There is no other book available on this case study The need for the book arises from the fact that here is a positive note for conservation in these times of so much negative news on the state of our environment More importantly the book shows how such restoration should be done and is therefore a model for many other islands around the world The book has many illustrations so as to give the book wide appeal and literally to show what can be done in terms of restoration All this is based on much scientific detail including many new data The aim is by way of example to demonstrate how practical restoration based on sound scientific research can be carried out for the betterment of ecological integrity and ecosystem health
