The Quorum-sensing Regulon of *Vibrio Fischeri* Sean Michael Callahan,1999 In this study five proteins regulated by quorum sensing are described from the marine bacterium *Vibrio fischeri* Each protein is positively regulated by 30C6 HSL and LuxR and negatively regulated at low population density by C8 HSL Probable LuxR autoinducer binding sites are found in the promoter regions of the genes encoding each of the proteins QsrP and RibB are encoded monocistronically whereas AcfA and QsrV appear to be encoded by a two gene operon In competition assays with the parent strain qsrP and acfA insertion mutants displayed altered colonization phenotypes with the squid symbiotic host RibB is believed to be an enzyme that catalyzes an initial step of riboflavin synthesis and AcfA is believed to be a pilus subunit protein The functions of QsrP and QsrV are unknown at this time Oriented divergently from acfA are open reading frames that code for two putative members of the LysR family of transcriptional regulators The shared promoter region suggests that transcription of acfA and qsrV may be regulated by one or both of these divergently transcribed proteins This work defines a quorum sensing regulon in *V. fischeri* A model describing its regulation is presented

Mycorrhiza Ajit Varma,Bertold Hock,2013-03-09 The second edition of *Mycorrhiza* falls into a time period of exceptionally rapid growth in mycorrhizal research Therefore the editors have been

most pleased with the decision of the Springer Verlag to revise the first edition and to incorporate the remarkable advances experienced in the mycorrhizal field The pace of discovery has been particularly fast at the two poles of biological complexity the molecular events leading to changes in growth and differentiation as well as the factors regulating the structure and diversity of natural populations and communities Therefore the most significant changes introduced in the new edition of this book are found within these topics Not only were many chapters up dated but also new chapters have replaced existing ones The individual decisions have not been easy since valuable contributions had to be sacrificed in favour of new aspects but the authors hope that a highly topical new edition will be of greatest benefit for a rapidly expanding field of research We welcome comments and critics from readers Since it was possible again to find leading scientists as contributors we are confident that this revised second edition will stimulate further progress and contribute to a deeper understanding of advances in the mycorrhizal field We are grateful to the Springer Verlag especially Dr Dieter Czeschlik for his continued interest and active help Dr Maja Hilber Bodmer and Dr
