**New Observations on the Behavior, Ecology, and Biology of Sharks and Rays** Austin Gallagher, Emily Lester, Brendan Shea, 2025-08-28 Sharks and rays are a group of ancient ecologically important and highly threatened fishes Their large size high mobility and diversity allow for the assessment of the structure and function of large expanses of the ocean while making them a unique model for assessing how species respond to human induced changes such as climate change Despite the notion that many aspects of their biology and ecology remain poorly understood access to this information has never been greater due to the rapid development of emerging technologies and approaches to study sharks and rays in virtually all areas of the ocean from shallow reefs to deep trenches As the global research effort on sharks and rays continues to expand annually we are also increasing the likelihood of making novel behavioral physiological or molecular discoveries as is the potential to expand or refine known correlates of their biology or ecology These exciting observations shed light on future research efforts and aid in adaptive management and conservation **Research Activities**, 1988

Tricas,Samuel H. Gruber,2013-06-29 The elasmobranch fishes include the living sharks skates and rays that are important members of nearly all marine ecosystems Their large size secretive behavior and wide ranging habits make them difficult to observe in the field or to maintain in captivity Consequently little is known about their natural behavior and how it is mediated by their sensory systems This volume is dedicated to the scientific contributions and memory of Donald Nelson a pioneer in the study of shark behavior sensory biology and remote instrumentation The two opening papers review Don Nelson s unique scientific

accomplishments and provide insight into his strong bias towards study of animals in the field These are followed by 14 scientific papers on elasmobranch behavior sensory biology and current monitoring technologies The papers on elasmobranch sensory biology and behavior address questions on hearing the lateral line electroreception the brain orientation behavior chemical irritants feeding and reproduction The latter section of the volume presents papers on conventional tagging techniques ultrasonic telemetry physiological telemetry remote monitoring techniques archival tagging and satellite tagging The intent of this volume is to familiarize both new and established scientists with the sensory biology and behavior of sharks and rays and to encourage further behavioral research on these animals in their natural environment

*Sharks of the Shallows* Jeffrey C. Carrier, 2017-08-31 Thrilling underwater photographs enrich this unique guide to the shallow water sharks of Florida and the Bahamas Agile sleek and precise sharks display many qualities we can admire and appreciate These marvels of evolution have adapted to thrive in every major aquatic realm on the planet from frigid Arctic waters through temperate but stormy seas and on into the tropics However few places on Earth are home to the amazing diversity of shark species that beautify the shallow waters of Florida and the Bahamas In this first ever book dedicated to the sharks of this region biologist Jeffrey C Carrier reveals the captivating lives of these large marine predators and describes how they have survived for over 400 million years Guiding readers through basic biology key attributes and identification tips the book explores what makes sharks such successful apex predators Carrier explains fascinating phenomena including the reason for the bizarre shape of the hammerhead how a bull shark is able to swim hundreds of miles up freshwater rivers what lies behind sharks remarkable capability to learn and remember and why many scientists believe that they are equipped with the most sophisticated sensory systems in the animal kingdom With the stunning full color underwater photography of Andy Murch Jillian Morris and Duncan Brake *Sharks of the Shallows* brings boaters fishers divers and shark lovers directly alongside these unfairly maligned creatures And not a moment too soon Sharks are experiencing stresses unlike any in their long history and are struggling to survive in a changing ocean They will continue to grace our coastlines only if we care enough to understand them

**Identifying and Comparing Important Areas for Marine Sustainable Use and Conservation** Sofie Van Parijs, Joseph Appiott, Leslie New, Piers Dunstan, Giuseppe Notarbartolo di Sciara, 2024-05-24 The ocean is under increasing threat from the expansion of human activities The combined impacts of these threats as well as the potential impacts of climate change and ocean acidification have placed thousands of species at risk of extinction and have impaired the structure function productivity and resilience of marine ecosystems Currently some parts of the world's oceans are significantly impacted yet are without any form of effective management Only a small proportion of the oceans are within protected area systems Globally measures are being taken to increase protection and sustainable management but application is uncoordinated and not always effective In order to support effective policy action by countries and competent international and regional organizations it is critical to build a sound understanding of the most ecologically and biologically

important ocean areas that support healthy marine ecosystems so that the necessary steps to ensure the long term function and resilience of these systems can be taken
