Swiss Biotech Report 2008:

Swiss Biotech Report 2008 Ernst & Young, 2008 *Science, the State and the City* Geoffrey Owen, Michael M. Hopkins, 2016 The book is about the link between science and business how discoveries made in academic laboratories are taken up by venture capitalists and investors and converted into products which if they are successful provide treatments for disease and may generate substantial returns for investors Healthcare Biotechnology Dimitris Dogramatzis, 2016-04-19 Foreseeing and planning for all of the possibilities and pitfalls involved in bringing a biotechnology innovation from inception to widespread therapeutic use takes strong managerial skills and a solid grounding in biopharmaceutical research and development procedures Unfortunately there has been a dearth of resources for this aspect of the field **The New Geography of Innovation** Xavier Tinguely, 2013-11-19 Innovation is the main engine of competitiveness However in a world in which everything goes faster the inherent nature of the innovation process has changed This book assesses both the theoretically and empirically intertwined relationship between innovation clusters and multinational enterprises in today's economy **Report of the ... Conference** International Law Association. Conference, 2008 **Désiré Collen - Biotech Pioneer** Paul Huybrechts, Frieda Van Wijck, 2020-08-27 D sir Collen Biotech Pioneer relates the fascinating story of scientific discovery in a time when biotechnology was not yet a science Although the cultivation and cross fertilization of plants were strictly speaking biotechnological techniques modern biotechnology dates from the early 1970s when pioneers such as biochemist Herbert Boyer from the university of California managed to transfer genetic material into a bacterium Together with venture capitalist Robert Swanson Boyer set up Genentech one of the first genetic engineering companies Just a few years later on the other side of the Atlantic in Leuven D sir Collen discovered t PA the enzyme responsible for fibrinolysis or the dissolving of blood clots Clogged arteries were then still one of the major causes of death The ensuing cooperation between Collen and Genentech was the beginning of a long lasting success story from which not only Collen but also scientific research and the University of Leuven benefitted greatly for many years According to a Reuters ranking KU Leuven has been from 2016 onwards the most innovative university in Europe Flanders and Belgium served as the cradle of several highly successful biotech companies t PA was a relatively expensive medicine and Collen went on to develop a much cheaper clot dissolving remedy to benefit patients in less affluent countries He failed however to find the necessary finances for Phase 3 trials Meanwhile he had set up ThromboGenics a company which later specialized in ophthalmology Collen continued to stimulate and finance research in other fields such as the cardiovascular research of Peter Carmeliet In 2013 he left ThromboGenics following a difference in views on the company's focus and in 2015 he set up Fund a biotech oriented investment firm Fund has meanwhile acquired a prominent place among European biotech investment funds and has scored some astonishing early successes In June 2020 Fund had 13 companies in its portfolio with several more waiting to come on board **Annual Report** SWX Group, 2007 **Intellectual Property and Biodiversity** Michelangelo

Temmerman, 2011-12-12 Biotechnology is at the heart of heated debates about ethics safety economic development and about the control over the biological materials and technologies used The latter grossly called biodiversity issues relating to the application of intellectual property has been the subject of a wealth of literature Yet the situation of animal genetic resources specifically has only marginally been addressed so far Many books and articles address biotechnology and agriculture but have only plants and seeds in mind Case law and specific regulation is equally scarce Exacerbated by the so called erosion of animal genetic resources climate change the globalization of the market place and a strong concentration of markets animal genetic resources however demand specific analysis and adjustments in intellectual property law The decoupling of rights over animal genetic resources as an abstract concept from those over the concrete animals is a fact today The application of patents in this context became a full fledged part of the management of animal genetic resources This monograph analyzes against this background the impact of the patent system on ownership traditions in agriculture on animal welfare and on biodiversity It looks at how those factors in turn are likely to affect the shape of patent law and how they should affect it The author hereby focuses on important specific issues arising including the following the underlying elements deciding on the shape of regulation innovation economic development agriculture human rights animal welfare the conservation of resources and equal trading conditions the continuing applicability of trademarks geographical indications copyright and trade secrets patentability rules and exclusions the extension of patent rights over progeny the meaning of essentially biotechnological processes the legal definitions of morality and ordre public in the context of animal welfare and the future of international patent law in the context of global governance theories With detailed investigation of how three major jurisdictions the European Union the United States and Canada have regulated the matter the book highlights unresolved issues in the laws dealing with animal genetic resources How do the usual principles of patent law affect ownership over animals in agriculture To what extent is patent law in accordance with neighbouring fields of regulation with relation to animal welfare How can intellectual property be used to alter stimulate or tackle developments in the realm of the conservation and promotion of biodiversity Questions like these are asked checked upon the more technical country studies and then used to put to test the adequacy of international patent regulation in a final chapter As a deeply informed overview of the arguments and discussion points this is the only book of its kind It links general discussions to the often technical and complicated patent regulations in the specific context of animal genetic resources It is sure to bring lawyers in the field closer to the policy debates and decision makers closer to the precise idiosyncrasies of patent law
