Elementary Differential Equations and Boundary Value Problems William E. Boyce, Richard C. DiPrima, Douglas B. Meade, 2021-10-19 Elementary Differential Equations and Boundary Value Problems 12th Edition is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite theoretical sometimes intensely practical and often somewhere in between In this revision new author Douglas Meade focuses on developing students conceptual understanding with new concept questions and worksheets for each chapter Meade builds

upon Boyce and DiPrima's work to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications. The main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent. Some familiarity with matrices will also be helpful in the chapters on systems of differential equations.

This new second edition has been updated to reflect the Red Book 7th edition and latest RICS guidance. Real estate valuation requires skill, judgment, and experience. There is no prescriptive way in which to value any property; the approach is down to the valuer. This book demystifies the number crunching and provides fresh ideas for new approaches, providing an essential resource for anyone involved with real estate valuation at any level, whether as a student, practitioner, or client. The 101 worked examples illustrate many different scenarios a valuer may encounter and the different techniques that can be employed. Each calculation is clearly set out, and the jargon-free commentary highlights points of interest and danger areas. This new 2nd edition features the latest changes in best practice. Covering updates you need to follow to be completely compliant, including Latest RICS guidance on depreciated replacement costs, DRC, and obsolescence; further examination of synergistic value and new calculations; Latest changes to the RICS Valuation Standards; the Red Book 7th edition; Updates on VAT and SDLT changes; Improved Valuer's calculation crib sheet; additional calculations on leasehold properties, ground leases, particularly residential ground leases. The worked examples covers traditional investment valuations, discounted cashflows, Synergistic values, development appraisals, depreciated replacement cost and obsolescence, profits method, and trading valuations.
