New Observations on the Behavior,

Ecology, and Biology of Sharks and Rays Austin Gallagher, Emily Lester, Brendan Shea, 2025-08-28 Sharks and rays are a group of ancient ecologically important and highly threatened fishes. Their large size, high mobility, and diversity allow for the assessment of the structure and function of large expanses of the ocean while making them a unique model for assessing how species respond to human-induced changes such as climate change. Despite the notion that many aspects of their biology and ecology remain poorly understood, access to this information has never been greater due to the rapid development of emerging technologies and approaches to study sharks and rays in virtually all areas of the ocean from shallow reefs to deep trenches. As the global research effort on sharks and rays continues to expand annually, we are also increasing the likelihood of making novel behavioral, physiological, or molecular discoveries as is the potential to expand or refine known correlates of their biology or ecology. These exciting observations shed light on future research efforts and aid in adaptive management and conservation.

Bio-Inspired Innovation and National Security National Defense University, 2010-10 Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private sector bioscientist interested in the emerging opportunities market of national security. This edited volume is

intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking This volume is about applications of the biological sciences here called biologically inspired innovations to the military Rather than treating biology as a series of threats to be dealt with such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries These opportunities range from looking at everything from genes to brains from enhancing human performance to creating renewable energy from sensing the environment around us to harnessing its power
