Space-Time Structure Erwin Schrödinger, Erwin Schr Dinger, 2014-05-14 Reprint of a classical book First published in 1950 and reprinted in 1954 and 1960 this lucid and profound exposition of Einstein s 1915 theory of gravitation is still essential reading Space-time Structure ,1950 Space-time Structure Erwin Schrödinger (physicien.),1950

Spacetime Structure of the Very Early Universe Steven Kenneth Blau,1985 *The Large Scale Structure of Space-time* ,1974 **Springer Handbook of Spacetime** Abhay Ashtekar, Vesselin Petkov, 2014-09-01 The Springer Handbook of Spacetime is dedicated to the ground breaking paradigm shifts embodied in the two relativity theories and describes in detail the profound reshaping of physical sciences they ushered in It includes in a single volume chapters on foundations on the underlying mathematics on physical and astrophysical implications experimental evidence and cosmological predictions as well as chapters on efforts to unify general relativity and quantum physics The Handbook can be used as a desk reference by researchers in a wide variety of fields not only by specialists in relativity but also by researchers in related areas that either grew out of or are deeply influenced by the two relativity theories cosmology astronomy and astrophysics high energy physics quantum field theory mathematics and philosophy of science It should also serve as a valuable resource for graduate students and young researchers entering these areas and for instructors who teach courses on these subjects The Handbook is divided into six parts Part A Introduction to Spacetime Structure Part B Foundational Issues Part C Spacetime Structure and Mathematics Part D Confronting Relativity theories with observations Part E General relativity and the universe Part F Spacetime beyond Einstein **On the Role of Spacetime Structure in Physics** Hans Westman, 2002 **Space-Time**

Structure Erwin Schrödinger, 1985-10-17 In response to repeated requests this classic book on space time structure by Professor Erwin Schr dinger is now available in the Cambridge Science Classics series First published in 1950 and reprinted in 1954 and 1960 this lucid and profound exposition of Einstein s 1915 theory of gravitation still provides valuable reading for students and research workers in the field The Large Scale Structure of Space-Time Stephen Hawking, G. F. R.

Ellis, 1973 This 1973 book discusses Einstein s General Theory of Relativity and its predictions concerning black holes and singularities in space time itself Special Issue: Spacetime Structure and Electrodynamics Wei-Tou Ni, Sperello Di Serego Alighieri, Jonathan Kaufman, Brian Keating, 2016 The Underdetermination of Global Spacetime Structure John Byron

Manchak, 2009 **Global Spacetime Structure** JB Manchak, 2020-12-31 This exploration of the global structure of spacetime within the context of general relativity examines the causal and singular structures of spacetime revealing some of the curious possibilities that are compatible with the theory such as time travel and holes of various types Investigations into the epistemic and modal structures of spacetime highlight the difficulties in ruling out such possibilities unlikely as they may seem at first The upshot seems to be that what counts as a physically reasonable spacetime structure in modern physics is far from clear Foundations of Space-Time Theories John Earman, Clark N. Glymour, John J. Stachel, 1977-11-25 Foundations of

Space Time Theories was first published in 1977 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The essays in this volume are based on the papers given at a conference on the philosophical aspects of the space time theory held under the auspices of the Minnesota Center for Philosophy of Science *Space-Time-Matter* Hermann Weyl, 2021-01-28 This is a new publication of Hermann Weyl's book *Space Time Matter* which was first published in German in 1919 and the English translation was published in 1922 What makes Weyl's book invaluable is that in addition to his masterfully presented lectures on special and general relativity starting with a helpful introduction to tensor analysis he was the first and essentially the only one so far who tried to reconcile two seemingly unreconcilable facts Minkowski's discovery deduced from the failed experiments to detect absolute motion of the spacetime structure of the world that it is a static four dimensional world containing en bloc the entire history of the perceived by us three dimensional world and the inter subjective fact that we are aware of ourselves and the world only at one single moment of time the present moment the moment now which constantly changes Weyl reached the conclusion that it is our consciousness somehow traveling in the four dimensional world along our worldlines which creates our feeling that time flows Unfortunately Weyl's reconciliation of the above facts has not been rigorously examined so far the apparent contradiction that the consciousness travels in the frozen four dimensional world spacetime is not an excuse because Weyl had surely been aware of it and nevertheless went public with his proposed resolution *Towards a Theory of Spacetime Theories* Dennis Lehmkuhl, Gregor Schiemann, Erhard Scholz, 2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally *Space, Time and Geometry* Patrick Suppes, 2013-03-09 The articles in this volume have been stimulated in two different ways More than two years ago the editor of *Synthese* Jaakko Hintikka announced a special issue devoted to space and time and articles were solicited Part of the reason for that announcement was also the second source of papers Several years ago I gave a seminar on special relativity at Stanford and the papers by Domotor Harrison Hudgin Latzer and myself partially arose out of

discussion in that seminar All of the papers except those of Grünbaum Fine the second paper of Friedman and the paper of Adams appeared in a special double issue of *Synthese* 24 1972 Nos 1 2 I am pleased to have been able to add the four additional papers mentioned in making the special issue a volume in the *Synthese* Library Of these four additional articles only the one by Fine has previously appeared in print *Synthese* 22 1971 448 481 its relevance to the present volume is apparent In preparing the papers for publication and in carrying out the various editorial chores of such a task I am very much indebted to Mrs Lillian O Toole for her extensive assistance

INTRODUCTION The philosophy of space and time has been of permanent importance in philosophy and most of the major historical figures in philosophy such as Aristotle Descartes and Kant have had a good deal to say about the nature of space and time *Space--time--matter* Hermann Weyl, 1922 **Space, Time and Gravitation** Sir Arthur Stanley Eddington, 1935 **Asymptotic Structure of Space-Time** F. Esposito, 2012-02-25 The Symposium on Asymptotic Structure of Space Time SOASST was held at the University of Cincinnati June 14 18 1976 We had been thinking of organizing a symposium on the properties of infinity for several years The subject had reached a stage of maturity and had also formed a basis for important current investigations It was felt that a symposium together with a publication of the proceedings would review summarize and consolidate the more mature aspects of the field and serve as an appropriate introduction to an expanding body of research We had from the first the enthusiastic support and encouragement of many colleagues with their cooperation and advice the Symposium acquired its final form These proceedings will attest to the value of the Symposium The Symposium consisted of thirty lectures and had an attendance of approximately one hundred and thirty The final impetus to our decision to go forward was the Bicentennial Anniversary of the independence of our country A most appropriate celebration on a University Campus surely is an intellectual Symposium which pays honor to the histories and traditional purposes of a University The Symposium was supported financially by the University of Cincinnati Bicentennial Committee the National Science Foundation the Gravity Research Foundation and by Armand Knoblaugh Professor Emeritus of Physics of the University of Cincinnati *The Spacetime Model* ,
