Java Power Tools John Ferguson Smart, 2008-04-22 All true craftsmen need the best tools to do their finest work and programmers are no different. Java Power Tools delivers 30 open source tools designed to improve the development practices of Java developers in any size team or organization. Each chapter includes a series of short articles about one particular tool whether it's for build systems, version control or other aspects of the development process, giving you the equivalent of 30 short reference books in one package. No matter which development method your team chooses whether it's Agile, RUP, XP, SCRUM or one of many others available, Java Power Tools provides practical techniques and tools to help you optimize the process. The book discusses key Java development problem areas and best practices and focuses on open source tools that can help increase productivity in each area of the development cycle including: Build tools including Ant and Maven 2; Version control tools such as CVS and Subversion, the two most prominent open source tools; Quality metrics tools that measure different aspects of code quality including CheckStyle, PMD, FindBugs and Jupiter; Technical documentation tools that can help you generate good technical documentation without spending too much effort writing and maintaining it; Unit Testing tools including JUnit 4, TestNG and the open source coverage tool Cobertura; Integration, Load and Performance Testing to integrate performance tests into unit tests, load test your application and automatically test web services; Swing interfaces and web interfaces; Issue management tools including Bugzilla and Trac; Continuous Integration tools such as Continuum, Cruise Control, LintBuild and Hudson. If you are a Java developer, these tools can help improve your development practices and make your life easier in the process. Lead developers, software architects and people interested in the wider picture will be able to gather from these pages some useful ideas about improving your project infrastructure and best practices.

Relevance of design patterns within web applications Niels Lange, 2011-06-22 Inhaltsangabe Abstract In 1994 the Gang of Four consisting of Erich Gamma, Richard Helm, Ralph Johnson and John Vlissides published the book *Design Pattern: Elements of Reusable Object Oriented Software*. Within that book the four information scientists described 23 design patterns which they classified into the categories: Creational Design Pattern, Structural Design Pattern and Behavioral Design Pattern. Even though design patterns exist since 15 years at present they have not lost relevance. Due to new concepts the usage of design patterns within web application is increasing.

Meanwhile all 23 established design patterns are available as PHP implementations. Aside web languages like AJAX, JavaScript, XHTML, and CSS also appreciate the strength of design patterns. At first, web languages like AJAX, PHP, et cetera will be analyzed if they qualify for the usage of design patterns. At second, the usage of design patterns within open source web applications like TYPO3, Joomla, Wordpress, et cetera will be examined. At third, various web developers of 1.1 web.de, Telekom, et cetera will be interviewed to investigate if and in which amount design patterns are used by companies. Intention of this thesis is to determine the relevance of design pattern within web applications. Thereby advantages will also be shown like disadvantages. Also the question if design patterns should be used by default or only if the concerning project reached a specific size will be answered.

Advances in Conceptual Modeling Claudenir M. Fonseca, *Generative and Component-Based Software Engineering* Jan Bosch, 2003-06-30 The size complexity and integration level of software systems is increasing constantly. Companies in all domains identify that software defines the competitive edge of their products. These developments require us to constantly search for new approaches to increase the productivity and quality of our software development and to decrease the cost of software maintenance. Generative and component based technologies hold considerable promise with respect to achieving these goals. GCSE 2001 constituted another important step forward and provided a platform for academic and industrial researchers to exchange ideas. These proceedings represent the third conference on generative and component based software engineering. The conference originated as a special track on generative programming from the Smalltalk and Java in Industry and Education Conference STJA organized by the working group Generative and Component Based Software Engineering of the Gesellschaft für Informatik FG 2.1.9 Object Oriented Software Engineering. However the conference has evolved substantially since then with its own independent stature, invited speakers and most importantly a stable and growing community. This year's conference attracted 43 submissions from all over the world indicating the broad international interest in the research field. Based on careful review by the program committee 14 papers were selected for presentation. I would like to thank the members of the program committee all renowned experts for their dedication in preparing thorough reviews of the submissions.

Wireless Communications and Applications Patrick Sénac, Max Ott, Aruna Seneviratne, 2012-03-29 This book constitutes the thoroughly refereed post conference proceedings of the First International ICST Conference on Wireless Communications and Applications ICWCA 2011 held in Sanya, China in August 2011. The 43 revised full papers presented were carefully reviewed and selected from around 90 submissions and cover a wide range of topics as mobile ad hoc networks, sensor networks, network architectural design, network protocol design, local area networks, MAC routing and transport protocols, quality of service provisioning, reliability and fault tolerance issues, resource allocation and management, signal processing, medical imaging, data aggregation techniques, security and privacy issues, wireless computing and applications for wireless network as smart grid, agriculture, health care, smart home, conditional monitoring, etc.
