Complexity and Simplicity in Science Education David Geelan, Kim Nichols, Christine V. McDonald, 2022-01-25 This edited volume brings together a broad range of international science education studies focusing on the interplay of teaching and learning science. It recognizes the complexity present in today's education associated with major science related issues faced by society such as climate change, diseases and pandemics, global conflicts over energy, food and water. The studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners. They bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow. **Advanced Machining Science** Vijay Kumar

Jain, 2022-09-30 As machining processes become more advanced so does the science behind them. This book emphasizes these scientific developments in addition to the more widely covered technological aspects providing a full understanding of how machining has adapted to material constraints and moved beyond conventional methods in recent years. Numerous processes have been developed to allow the use of increasingly tough corrosion resistant and temperature resistant materials in machining. The advanced machining processes covered in this book range from mechanical, thermoelectric and electrochemical including abrasive water jet machining, electric discharge machining and micromachining, ion beam machining and hybrid processes. It also addresses the sustainability issues raised by these processes. The underlying science of machining is centered throughout as none of these processes can reach their full potential without both technical expertise and scientific understanding. Advanced Machining Science and its scientific approach will be of particular interest to students, researchers and shop floor engineers.
