Improving Instruction Through Supervision, Evaluation, and Professional Development Michael DiPaola, Charles A. Wagner, 2018-02-01. In this second edition of *Improving Instruction Through Supervision, Evaluation, and Professional Development*, we have maintained the conceptual framework while updating sections to provide the most recent research on instructional strategies that have the most promise of helping all students learn. Modifications of the law resulting from the reauthorization of the 50-year-old Elementary and Secondary Education Act, Every Student Succeeds Act (ESSA) 2015, and their implication for practice are embedded throughout this new edition. Updated data collection tools for classroom observations are also provided. We included a link to a website that contains all the observation tools in electronic format so that observers can have the opportunity to collect data on a tablet or laptop, save the observation data as a PDF file, and e-mail those data to the teacher observed. This new edition recognizes the reality that all principals are responsible for supervision, evaluation, and professional development of their teachers' tasks that are neither simple nor without conflict. The primary audience of this text is aspiring and practicing principals. We hope to help them understand both the theory and practice of supervision, evaluation, and professional development. However, observing instruction, collecting data for reflection, and having conversations about teaching are not the sole provinces of principals. Master teachers, teacher leaders, and teacher colleagues can also benefit from the supervisory sections of the book, especially the chapters on high-quality instruction, improving instruction, and the classroom data collecting tools. The book provides numerous tools specifically designed to collect a variety of data in classrooms to improve instruction. Embedded in each chapter are exercises to apply Theory into Practice by responding to a set of questions posed by the key issues of the chapter. After the explication and illustration of the key concepts and principles of the chapter, actual Instructional Leadership Challenges as described by a successful practicing principal for reflection and analysis.

Smart Systems and IoT: Innovations in Computing Arun K. Somani, Rajveer Singh Shekhawat, Ankit Mundra, Sumit Srivastava, Vivek Kumar Verma, 2019-10-26. The book features original papers from the 2nd International Conference on Smart IoT Systems, Innovations and Computing (SSIC 2019) presenting scientific work related to smart solution concepts. It discusses computational collective intelligence, which includes interactions between smart devices, smart environments, and smart interactions, as well as information technology support for such areas. It also describes how to

successfully approach various government organizations for funding for business and the humanitarian technology development projects Thanks to the high quality content and the broad range of the topics covered the book appeals to researchers pursuing advanced studies Bacterial Cell Wall Structure and Dynamics Tobias Dörr,Partick J. Moynihan,Christoph Mayer,2019-12-27 Bacterial cells are encased in a cell wall which is required to maintain cell shape and to confer physical strength to the cell The cell wall allows bacteria to cope with osmotic and environmental challenges and to secure cell integrity during all stages of bacterial growth and propagation and thus has to be sufficiently rigid Moreover to accommodate growth processes the cell wall at the same time has to be a highly dynamic structure During cell enlargement division and differentiation bacteria continuously remodel degrade and resynthesize their cell wall but pivotally need to assure cell integrity during these processes Finally the cell wall is also adjusted according to both environmental constraints and metabolic requirements However how exactly this is achieved is not fully understood The major structural component of the bacterial cell wall is peptidoglycan PG a mesh like polymer of glycan chains interlinked by short chain peptides constituting a net like macromolecular structure that has historically also termed murein or murein sacculus Although the basic structure of PG is conserved among bacteria considerable variations occur regarding cross bridging modifications and attachments Moreover different structural arrangements of the cell envelope exist within bacteria a thin PG layer sandwiched between an inner and outer membrane is present in Gram negative bacteria and a thick PG layer decorated with secondary glycopolymers including teichoic acids is present in Gram positive bacteria Furthermore even more complex envelope structures exist such as those found in mycobacteria Crucially all bacteria possess a multitude of often redundant lytic enzymes termed autolysins and other cell wall modifying and synthesizing enzymes allowing to degrade and rebuild the various structures covering the cells However how cell wall turnover and cell wall biosynthesis are coordinated during different stages of bacterial growth is currently unclear The mechanisms that prevent cell lysis during these processes are also unclear This Research Topic focuses on the dynamics of the bacterial cell wall its modifications and structural rearrangements during cell growth and differentiation It pays particular attention to the turnover of PG its breakdown and recycling as well as the regulation of these processes Other structures for example secondary polymers such as teichoic acids which are dynamically changed during bacterial growth and differentiation are also covered In recent years our view on the bacterial cell envelope has undergone a dramatic change that challenged old models of cell wall structure biosynthesis and turnover This collection of articles aims to contribute to new understandings of bacterial cell wall structure and dynamics
