Marsalek,W. Ed Watt,Evzen Zeman,2012-12-06 Urban population growth dramatically alters material and energy fluxes in the affected areas with concomitant changes in landscape altered fluxes of water sediment chemicals and pathogens and increased releases of waste heat These changes then impact on urban ecosystems including water resources and result in their degradation Such circumstances make the provision of water services to urban populations even more challenging Changing weather patterns rising temperature and large variations in precipitation contribute to increased damages caused by weather related disasters including floods One of the major contributors to increasing flood peaks are land use changes and particularly urban development Consequently there is a need to look for low environmental impact land development and to manage runoff in urban areas by storm water management Much progress in the management of urban waters has been achieved in the most advanced jurisdictions but much more remains to be done In this respect the EC Water Framework Directive can provide some guidance Urban water management issues are particularly important in the countries in transition in Central and Eastern Europe During the last decade political economical and social changes in the countries

under transition have influenced almost every element of the public sector including water services There is an urgent need for exchange of information among various countries on this issue and for identification of best approaches to achieving this transition

Integrated Urban Water Resources Management Petr Hlavinek, Tamara Kukharchyk, Jiri Marsalek, Ivana Mahrikova, 2007-05-22 Growing populations and rising standards of living exert stress on water supply and the quality of drinking water In wastewater management new challenges are caused by new chemicals of concern including endocrine disrupters pharmaceuticals hormones and personal care products which often pass through wastewater treatment plants unabated but may cause serious impacts on receiving aquatic ecosystems Advanced wastewater treatment leads to production of biosolids which are processed in various ways including on land applications in agriculture Municipal effluents combined with increasing withdrawals of water lead to the worsening of receiving water quality Expert opinions indicate that the only way to deal with the current urban water management dilemmas is by integrated management and innovative delivery of water services This book presents important aspects of Challenges in Management of Urban Water Resources Challenges in Urban Water Supply Urban Drainage and Water Bodies Wastewater Treatment and Security and Wastewater Treatment and Reuse
