Pearce,2023-05-09 The Pearce Report Blueprint for a Green Economy puts the role which monetary evaluation of environmental costs and benefit can play firmly into the public eye This book goes further and looks at six countries where such evaluation techniques are applied and at the obstacles to their further use The case studies written by leading experts in each nation show how these methods are being taken up in the UK Norway and Italy and the ways in which they are

already extensively in use in the USA Germany and the Netherlands The authors also describe the obstacles to their use the lack of knowledge of environmental economics at government level the competition from other government priorities the failure of environmental groups to grasp the importance of financial evaluation to their cause But as this book makes clear significant advances are being made both in the implementation of these economic techniques and above all in striking and yet further developments in economic thinking

Urban Water Infrastructure K.E. Schilling, Eric Porter,2012-12-06 URBAN WATER INFRASTRUCTURE NATO ADVANCED RESEARCH WORKSHOP SUMMARY 22 27 JUNE 1989 KYLE E SCHILLING P E Workshop Director The Workshop was based on the recognition that all NATO countries are concerned with similar water infrastructure issues Present problems are aggravated by aging and neglected facilities by inadequate financing and by water management institutions reflecting the needs of an earlier era Service needs to be provided for expanding populations at the same time that corrective measures must be taken for decaying older urban centers resulting both from neglect and expiring service life These needs exist within the framework of other competing and conflicting uses for existing and yet to be developed water sources The problems have generated some highly visible national debates over financing due to the large sums involved Despite differences in the age of the North American European and other societies the technological ages of water supply and storm water systems are much the same and provide a common denominator in the worldwide trend to urbanization Examination of approaches to urban water management also indicates that they are generally based on past experience and institutions created in a non urban era The physical financial and institutional alternatives are consequently often out of step with current urban environment Historically the supply of adequate water and efficient storm water management have also been top priority items with water quality and other aspects of environmental protection assuming a lower priority after basic supply needs have been met
