

TC Phonics- Unit 2: Word Scientists

Session 2: We Are Word Scientists

Teaching Point: Students will be able to study the alphabet chart in partnerships, noticing different features of letters including upper and lowercase and the similarities and differences between them.

Materials To Prepare:

- Mabel
- Small alphabet charts for students
- Large alphabet chart displayed on the wall

Connection

The teacher will help the students to become word scientists, to think about what scientists do, and to imagine doing those things when studying words. The teacher will highlight the work of looking closely.

The teacher say that today will be begin a new unit where we get to be word scientists! The teacher will ask the students if they know what scientists do and for them to turn and talk about it. The teacher will mention what she heard the students say (ex. Scientists collect things and study what they collect). The teacher can say how it reminds her of when the first astronaut went to the moon and collected soil and rocks and when he came back to earth, he began to study all of the things. The teacher will say that scientists collect stuff and study what they collect and how they may spend an hour or even a week studying one bug. They notice every little thing. Today, the students will study letters and words like scientists do!

The teacher will build excitement for the new unit by making Mabel a word scientist. The teacher will say that Mabel also wants to be a word scientist (C an put on a lap coat on Mabel). Mabel will "whisper" to the teacher that she can't wait to get started. The teacher will suggest that as word scientists, each student needs a copy of the alphabet chart (give one to each partnership). The teacher will demonstrate how to read it, naming the letter and the corresponding picture, and then making the letter sound. The teacher will model and read it out loud with the students.

Teaching (To)

The teacher will demonstrate looking closely at the alphabet chart by noticing lots of things. The teacher will channel the students to look closely at the first row- the

identifies the instructional methods and areas of focus shown to be most effective for promoting young children's PreK-2 growth in reading, writing, oral language, and the connections among them. In 33 chapters, the Handbook covers conceptual foundations, development and instruction of both code and meaning-related literacy skills, professional development, and family engagement supporting equity across populations and learning beyond traditional boundaries, including digital and out-of-school contexts. Highlighted throughout are issues around access to high-quality instruction, working with multilingual populations, and data-based decision making and interventions.

The Science of Reading Margaret J. Snowling, Charles Hulme, Kate Nation, 2022-05-12. Provides an overview of state-of-the-art research on the science of reading, revised and updated throughout. The Science of Reading presents the most recent advances in the study of reading and related skills. Bringing together contributions from a multidisciplinary team of experts, this comprehensive volume reviews theoretical approaches, stage models of reading, cross-linguistic studies of reading, reading instruction, the neurobiology of reading, and more. Divided into six parts, the book explores word recognition processes in skilled reading, learning to read and spell, reading comprehension and its development, reading and writing in different languages, developmental and acquired reading disorders, and the social, biological, and environmental factors of literacy. The second edition of The Science of Reading is extensively revised to reflect contemporary theoretical insights and methodological advances. Two entirely new chapters on co-occurrence and complexity are accompanied by reviews of recent findings and discussion of future trends and research directions. Updated chapters cover the development of reading and language in preschools, the social correlates of reading, experimental research on sentence processing, learning to read in alphabetic orthographies, comorbidities that occur frequently with dyslexia, and other central topics. Demonstrates how different knowledge sources underpin reading processes using a wide range of methodologies. Presents critical appraisals of theoretical and computational models of word recognition and evidence-based research on reading intervention. Reviews evidence on skilled visual word recognition, the role of phonology, methods for identifying dyslexia, and the molecular genetics of reading and language. Highlights the importance of language as a foundation for literacy and as a risk factor for developmental dyslexia and other reading disorders. Discusses learning to read in different types of writing systems, with a language impairment, and in variations of the home literacy environment. Describes the role of contemporary analytical tools such as dominance analysis and quantile regression in modelling the development of reading and comprehension. Part of the acclaimed Wiley-Blackwell Handbooks of Developmental Psychology series, the second edition of The Science of Reading: A Handbook remains an invaluable resource for advanced students, researchers, and specialist educators looking for an up-to-date overview of the field.
