Wafer Scale Integration Earl E. Swartzlander Jr.,2012-12-06 Wafer Scale Integration WSI is the culmination of the quest for larger integrated circuits In VLSI chips are developed by fabricating a wafer with hundreds of identical circuits testing the circuits dicing the wafer and packaging the good dice In contrast in WSI a wafer is fabricated with several types of circuits generally referred to as cells with multiple instances of each cell type the cells are tested and good cells are interconnected to realize a system on the wafer Since most signal lines stay on the wafer stray capacitance is low so that high speeds are achieved with low power consumption For the same technology a WSI implementation may be a factor of five faster dissipate a factor of ten less power and require one hundredth to one thousandth the volume Successful development of WSI involves many overlapping disciplines ranging from architecture to test design to fabrication including laser linking and cutting multiple levels of interconnection and packaging This book concentrates on the areas that are unique to WSI and that are as a result not well covered by any of the many books on VLSI design A unique aspect of WSI is that the finished circuits are so large that there will be defects in some portions of the circuit Accordingly much attention must be devoted to designing architectures that facilitate fault detection and reconfiguration to of WSI include fabrication circumvent the faults Other unique aspects technology and packaging *Proceedings of the ... Telemedicine in Low-Resource Settings, Volume 2 Richard Wootton,Laurent Bonnardot,Sophie Delaigue,2020-04-24 Telemedicine networks to support healthcare workers in resource limited settings often for humanitarian purposes have evolved in a largely autonomous way Communication between the networks has been informal and relatively limited in scope This situation could be improved by developing a comprehensive approach to the collection and dissemination of information While many telemedicine networks remain experimental some have matured to become routine services which assist health care delivery in challenging environments For example there are a few networks which have been in operation for over a decade and provide store and forward telemedicine services to doctors in lowand middle income countries These networks deliver clinically useful services and improved healthcare access However like much of telemedicine the formal evidence for their cost effectiveness remains weak Topics of current research interest therefore include the cost effectiveness of telemedicine in resource limited settings Other topics of interest concern outcomes data and methods for gathering it such as patient quality of life following a telemedicine episode the knowledge gain of healthcare staff involved in telemedicine and staff recruitment and retention in rural areas Finally there is little published information about the performance of these telemedicine networks and methods for measuring it about how best to

manage them and about how to share resources between them Following the previous volume this Research Topic will document current evidence supporting the use of telemedicine in resource limited settings *Technical Report* ,1979

Structure Discovery in Natural Language Chris Biemann,2011-12-08 Current language technology is dominated by approaches that either enumerate a large set of rules or are focused on a large amount of manually labelled data The creation of both is time consuming and expensive which is commonly thought to be the reason why automated natural language understanding has still not made its way into real life applications yet This book sets an ambitious goal to shift the development of language processing systems to a much more automated setting than previous works A new approach is defined what if computers analysed large samples of language data on their own identifying structural regularities that perform the necessary abstractions and generalisations in order to better understand language in the process After defining the framework of Structure Discovery and shedding light on the nature and the graphic structure of natural language data several procedures are described that do exactly this let the computer discover structures without supervision in order to boost the performance of language technology applications Here multilingual documents are sorted by language word classes are identified and semantic ambiguities are discovered and resolved without using a dictionary or other explicit human input The book concludes with an outlook on the possibilities implied by this paradigm and sets the methods in perspective to human computer interaction The target audience are academics on all levels undergraduate and graduate students lecturers and professors working in the fields of natural language processing and computational linguistics as well as natural language engineers who are seeking to improve their systems **The Office** ,1975 **Research Product - U.S. Army Research Institute for the Behavioral and Social Sciences** ,2005 **Sport and Disability** Florian

Kiuppis,2018-12-07 Inclusion is primarily discussed in education With the increasing number of member states of the United Nations ratifying the Convention on the Rights of Persons with Disabilities academics have vividly discussed inclusion in the context of other areas of life such as the community at large as social inclusion in the context of work and employment and with regard to the aspects addressed by Article 30 5 of the Convention namely cultural life recreation leisure and sport This volume is organized around the topic inclusion in sport and has a particular focus on the participation of people with disabilities in sport Typical barriers for people with disabilities to participate in sport include lack of awareness on the part of people without disabilities as to how to involve them in teams adequately lack of opportunities and programmes for training and competition too few accessible facilities due to physical barriers and limited information on and access to resources The chapters attribute central importance to the processes and mechanisms of inclusion that operate within sporting environments and to the question of either what happens or could happen to persons with disabilities who enter the playing field The chapters were originally published in a special issue of Sport in Society *The United States Patents Quarterly* ,1992 Pulp and Paper Magazine of Canada ,1970 Soil Hydrology, Land Use and Agriculture Manoj Shukla,2011
