Highwall Mining John Loui Porathur,Pijush Pal Roy,Baotang Shen,Shivakumar Karekal,2017-07-06 This comprehensive technical book on highwall mining covers theory and practice coupled with practical examples and design aspects It contains eight extensive chapters elaborating broad spectrum functionalities of highwall mining and its operational aspects covering world scenario economic potential methods of coal extraction design methodology including empirical web pillar design numerical modelling for stress analysis safety factor for web pillars panel and barrier design small and large scale numerical modelling multiple seam interaction and design coal web pillar strength equivalent width concept laboratory testing new web pillar strength formula effect of weak bands in coal seam slope stability safety and ground monitoring hazards and regulatory requirements case examples norms and guidelines for practice It also summarizes the results of research carried out by the CSIR Central

Institute of Mining and Fuel Research CSIR CIMFR India and the Commonwealth Scientific and Industrial Research Organisation CSIRO Australia on the subject The book will equip readers in understanding the complex multiple seam scenarios for highwall mining and its design for maximum coal recovery from any given site with better economics which will aid the mining companies in extracting locked up coal following the safety norms to avoid hazards and minimise instability issues A large number of case studies is included to illustrate the application of numerical modelling for prior estimation and viability of highwall mining operations under varying geomining conditions The book will be of interest to professionals and academics in the field of mining engineering specifically but will also interest civil geomechanical and geological engineers as well as rock mechanics professionals

Modeling Mariam Kiran,2017-08-30 From the Foreword This book exemplifies one of the most successful approaches to modeling and simulating the new generation of complex systems FLAME was designed to make the building of large scale complex systems models straightforward and the simulation code that it generates is highly efficient and can be run on any modern technology FLAME was the first such platform that ran efficiently on high performance parallel computers and a version for GPU technology is also available At its heart and the reason why it is so efficient and robust is the use of a powerful computational model Communicating X machines which is general enough to cope with most types of modelling problems As well as being increasingly important in academic research FLAME is now being applied in industry in many different application areas This book describes the basics of FLAME and is illustrated with numerous examples Professor Mike Holcombe University of Sheffield UK Agent based models have shown applications in various fields such as biology economics and social science Over the years multiple agent based modeling frameworks have been produced allowing experts with non computing background to easily write and simulate their models However most of these models are limited by the capability of the framework the time it takes for a simulation to finish or how to handle the massive amounts of data produced FLAME Flexible Large scale Agent based Modeling Environment was produced and developed through the years to address these issues This book contains a comprehensive summary of the field covers the basics of FLAME and shows how concepts of X machines can be stretched across multiple fields to produce agent models It has been written with several audiences in mind First it is organized as a collection of models with detailed descriptions of how models can be designed especially for beginners A number of theoretical aspects of software engineering and how they relate to agent based models are discussed for students interested in software engineering and parallel computing Finally it is intended as a guide to developers from biology economics and social science who want to explore how to write agent based models for their research area By working through the model examples provided anyone should be able to design and build agent based models and deploy them With FLAME they can easily increase the agent number and run models on parallel computers in

order to save on simulation complexity and waiting time for results Because the field is so large and active the book does not aim to cover all aspects of agent based modeling and its research challenges The models are presented to show researchers how they can build complex agent functions for their models The book demonstrates the advantage of using agent based models in simulation experiments providing a case to move away from differential equations and build more reliable close to real models The Open Access version of this book available at <https://doi.org/10.1201/9781315370729> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Handbook on the Toxicology of Metals Gunnar F. Nordberg, Bruce A. Fowler, Monica Nordberg, 2014-08-07 Handbook on the Toxicology of Metals Fourth Edition bridges the gap between established knowledgebase and new advances in metal toxicology to provide one essential reference for all those involved in the field This book provides comprehensive coverage of basic toxicological data emphasizing toxic effects primarily in humans but also those of animals and biological systems in vitro The fourth edition also contains several new chapters on important topics such as nanotoxicology metals in prosthetics and dental implants gene environment interaction neurotoxicology metals in food renal cardiovascular and diabetes effects of metal exposures and more Volume I covers General Considerations and Volume II is devoted to Specific Metals A multidisciplinary resource with contributions from internationally recognized experts the fourth edition of the Handbook on the Toxicology of Metals is a prominent and indispensable reference for toxicologists physicians pharmacologists engineers and all those involved in the toxicity of metals Contains 61 peer reviewed chapters dealing with the effects of metallic elements and their compounds on biological systems Includes information on sources transport and transformation of metals in the environment and on certain aspects of the ecological effects of metals to provide a basis for better understanding of the potential for adverse effects on human health Covers the toxicology of metallic nanomaterials in a new comprehensive chapter Metal toxicology in developing countries is dealt with in another new chapter emphasizing the adverse effects on human health by the inadequate handling of e-waste Other new chapters in the 4th edition include Toxic metals in food Toxicity of metals released from medical devices Gene environment interactions Neurotoxicology of metals Cardiovascular disease Renal effects of exposure to metals Gold and gold mining Iridium Lanthanum Lithium and Rhodium

Computational Movement Analysis Patrick Laube, 2014-09-02 This SpringerBrief discusses the characteristics of spatiotemporal movement data including uncertainty and scale It investigates three core aspects of Computational Movement Analysis Conceptual modeling of movement and movement spaces spatiotemporal analysis

methods aiming at a better understanding of movement processes with a focus on data mining for movement patterns and using decentralized spatial computing methods in movement analysis The author presents Computational Movement Analysis as an interdisciplinary umbrella for analyzing movement processes with methods from a range of fields including GIScience spatiotemporal databases and data mining Key challenges in Computational Movement Analysis include bridging the semantic gap privacy issues when movement data involves people incorporating big and open data and opportunities for decentralized movement analysis arising from the internet of things The interdisciplinary concepts of Computational Movement Analysis make this an important book for professionals and students in computer science geographic information science and its application areas especially movement ecology and transportation research [Mountain Bike](#) ,2008-05 Mountain Bike magazine has everything for the mountain bike enthusiast from the best mountain bike and equipment reviews to a trail database with the recommended MTB trails [The Software Encyclopedia](#) ,1986 **Management and Technology in Knowledge, Service, Tourism & Hospitality** Ford Lumban Gaol,Wyne Mars,Hoga Saragih,2014-04-29 Management and Technology in Knowledge Service Tourism and Hospitality contains papers covering a wide range of topics in the fields of knowledge and service management web intelligence tourism and hospitality This overview of current state of affairs and anticipated developments will be of interest to researchers entrepreneurs and students alike
