practical interest can be stated about them at the present time On the other hand the various types of piston engine have been developed to a stage of high efficiency and therefore will be exclusively considered in this work with occasional references to the other type for the purpose of comparative illustration The gas engine belongs to the general class of motors which convert natural energy existing in the form of heat into mechanical energy which is subsequently utilized for the performance of useful work These motors are usually called heat engines and may be divided into two general classes according to the manner in which the heat is applied to the working substance of the engine as follows 1 External combustion engines driven by the expansive energy of steam or air heated from an external source through the walls of a vessel containing the working substance such as the various types of steam and hot air engines About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Practical Gasoline Engine E. W. Longanecker, 2015-06-15 Excerpt from *The Practical Gasoline Engine A Manual of Gas and Gasoline Knowledge* The great demand for gas and gasoline engines is one of the remarkable features of the age While steam and electricity have done wonders in furnishing power and locomotion neither as yet is sufficiently practical for business or pleasure in cases where a moderate amount of power is required On the road the latter is limited to the wealthy while steam is hardly employed by any for reasons that soon suggest themselves For business purposes we believe that gas and gasoline engines are much more adaptable than either of the others electricity still being unsufficiently developed so that expense cuts too much of an item to justify its general use and steam being noisy and in a great many cases on farms for instance the cause of stacks and barns being swept away by flames caused maybe by some sudden change of the wind What the future has in store for either steam or electricity we do not pretend to foretell but for the present the gas or gasoline engine is the one that comes up to the standard that requires durability speed safety smoothness and yet within the reach of the man of moderate means About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *Audels gas engine manual*, 1907 *The Gas-Engine Handbook* E.
