Management Guide to Retrofitting Wastewater Treatment Plants Lawrence E. Quick, 2024-11-15 FROM THE PREFACE Since Federal funding is scarce for massive upgrades and or complete new Wastewater Treatment Plants WWTP construction treatment plant operators superintendents managers city councils boards etc must get more creative on funding and coordinating process equipment replacements Contained herein you will find hints tactics and procedures aimed at getting the biggest bang for your public buck During the 1970s and 1980s through grants the Federal Government paid 80% of costs to build new or expanded wastewater treatment plants pumping stations and collection system renovations The majority of the grants were to upgrade primary treatment facilities to secondary and secondary to tertiary treatment status based on Clean Water Act regulations If your facility was fortunate enough to receive grants you were in good shape for approximately 20 to 30 years depending on community growth rates Since most wastewater treatment facilities are designed to last 20 years many of the new or expanded facilities in the 70 s and 80 s are reaching the end of their service life Some may have reached it sooner due to growth beyond the expected rate inadequate preventive maintenance or design inadequacies when built Now you have identified problems with insufficient aeration capacity equipment mechanical failure

insufficient pump station capacity infrastructure deterioration etc and need to do something about it before you violate your NPDES permit if you have not already This equipment seems very costly to replace because you now must pay 100% opposed to 20% with the grants Many WWTP are in need of replacement and or upgraded equipment The equipment itself is typically about 25% to 50% of the total project cost This cannot be changed much However the remaining 50% to 75% engineering installation labor costs and project management may be whittled down dependent on how active and creative the project coordinator yourself wants to be in the process When EPA funded 80% of project costs in prior years it was no big deal to have an open pocketbook attitude Those days have changed forever and so have procurement procedures for projects A Management Guide to Retrofitting Wastewater Treatment Plants is geared towards the managerial and administrative scope of a Lead Operator Superintendent Facility Manager type of Wastewater individual All the junior college courses available practical operator experience and certification status will still not offer the opportunity to learn administrative and cost savings techniques similar to operating a business But soon your job may demand these skills This book is a handy reference for making the task of upgrading retrofitting wastewater process equipment easier and less costly It includes ideas for selling upgrade ideas to superiors pre and post project activities and certain management techniques useful for successful retrofitting or upgrading in past projects This book should prove helpful to those who find themselves involved in retrofitting their facility and need assistance on resolving facility problems including treatment plant operators superintendents managers city council members and boards It is also a valuable reference guide for municipal operations individuals who want to retain control of their facilities but don't quite know how It was written with the front line operator superintendent and manager in mind in common operator language in order to allow easier understanding It contains many tips and techniques which operators can implement immediately

A Guide to Compliance for Process Safety Management/Risk Management Planning (PSM/RMP) Frank R. Spellman, 1998-06-03 Establishing maintaining and refining a comprehensive Process Safety Management PSM and Risk Management Program RMP is a daunting task The regulations are complicated and difficult to understand The resources available to manage your program are limited Your plant could be the target of a grueling PSM and RMP compliance audit by OSHA and or the EPA which could scrutinize your facility according to their stringent audit guidelines Ask yourself some questions Is your municipal plant or industrial facility ready to meet new OSHA and EPA PSM RMP regulations Do you understand OSHA's and EPA's requirements Do you know how OSHA EPA are interpreting PSM RMP requirements Are you prepared for a possible audit Is your existing PSM RMP comprehensive maintainable and cost effective If you answered no to any of these you need the expert guidance provided by A Guide to Compliance for Process Safety Management Risk Management Planning PSM RMP In recent years chemical accidents that involved the release of toxic substances have claimed the lives of hundreds of employees and thousands of others worldwide In order to prevent repeat occurrences of catastrophic chemical incidents OSHA and the USEPA have joined forces to bring

about the OSHA Process Safety Management Standard PSM and the USEPA Risk Management Program RMP Chemical disaster situations can occur due to human error in system operation and or a malfunction in system equipment Other emergency situations that must also be considered and planned for include fire floods hurricanes earthquakes tornadoes snow ice storms avalanches explosions truck accidents train derailments airplane crashes building collapses riots bomb threats terrorism and sabotage Be prepared Determine the differences and similarities between OSHA s PSM and EPA s RMP regulations Survey your facility to determine your needs Plug your site specific data into regulation templates Prepare your data records for your PSM compliance package Calculate your Worst Case scenarios Assemble a viable PSM program in a logical sequential and correct manner Supervise program implementation elements with the overall management system This user friendly plain English straightforward guide to new EPA and OSHA regulations describes explains and demonstrates a tested proven workable methodology for installation of complete correct safety and risk programs It provides the public administrator plant manager plant engineer and organization safety professionals with the tool needed to ensure full compliance with the requirements of both regulations Those with interests in HazMat response and mitigation procedures will also find it of use This guidebook is designed to be applicable to the needs of most operations involved in the production use transfer storage and processing of hazardous materials It addresses Process Safety Management and Risk Management Planning for facilities handling hazardous materials and describes the activities and approach to use within U S plants and companies of all sizes From the Author This guidebook is designed to enable the water wastewater and general industry person who has been assigned the task of complying with these new rules to accomplish this compliance effort in the easiest most accurate manner possible A Guide to Compliance for Process Safety Management Risk Management Planning PSM RMP is user friendly This How To Do It guide will assist those who are called upon to design develop and install PSM and RMP systems within their companies or plants It describes explains and demonstrates a proven methodology an example that actually works and has been tested More than anything else this guidebook really is a Template It provides a pattern that can be used to devise a compliance package that is accurate Simply stated like the standard template this guidebook can provide the foundation the border the framework from which any covered organization s PSM and RMP effort can be brought into proper compliance The user simply plugs in site specific information into the model presented in this guidebook This guidebook first shows that PSM and RMP are similar and are interrelated in many ways and different in only a few ways Many of the processes listed in PSM are also listed in RMP the additional RMP processes are in industry sectors that have a significant accident history Along with showing the similarities and interrelationships between PSM and RMP the requirements of RMP that are in addition to those listed in PSM are discussed This guidebook also discusses the RMP requirement for off site consequence analysis and the methodology that can be utilized in performing it If the PSM project team follows this format it will be able to assemble a viable PSM program in a logical sequential and correct manner
