Yair Sharan,Abraham Tal,Harry Coccossis,2007-07-23 Water is one of the most essential elements for sustaining life National
regional and local authorities throughout the world are responsible to maintain necessary infrastructure and safeguard
resources for an orderly uninterrupted supply of good quality healthy and safe water for everyday needs of all the population
These needs which are growing fast with economic growth development and rising prosperity include water for drinking as
well as for sanitation laundry gardening recreation and other domestic uses An adequate supply of water resources should be
safeguarded also for all sectors of the economy and society including agriculture industry energy tourism ecosystem
protection and more Drinking water is again becoming a global issue from many perspectives There are still parts of the
globe which lack the necessary water resources for their basic needs whether in terms of quantity or quality or both
Demographic growth in several world regions is likely to increase pressures for the development of water resources and
further exploitation of existing ones Changes in production and consumption patterns are expected to aggravate further the
pressures on the quantity and quality of water resources across the world Rising standards of living intensive agriculture and
new industrial processes lead not only to increasing com tition for water use and rising costs of water provision but also to
mounting risks An Introduction to Engineering of Water Supply Systems J. Paul Guyer, P.E., R.A.,2021-04-23 Introductory
