Biological Wastewater Treatment: Principles, Modeling and Design Guang-Hao Chen, Mark C.M. van Loosdrecht, G.A. Ekama, Damir Brdjanovic, 2020-07-15 The first edition of this book was published in 2008 and it went on to become IWA Publishing's bestseller Clearly there was a need for it because over the twenty years prior to 2008 the knowledge and understanding of wastewater treatment had advanced extensively and moved away from empirically based

approaches to a fundamental first principles approach based on chemistry microbiology physical and bioprocess engineering mathematics and modelling However the quantity complexity and diversity of these new developments was overwhelming for young water professionals particularly in developing countries without readily available access to advanced level tertiary education courses in wastewater treatment For a whole new generation of young scientists and engineers entering the wastewater treatment profession this book assembled and integrated the postgraduate course material of a dozen or so professors from research groups around the world who have made significant contributions to the advances in wastewater treatment This material had matured to the degree that it had been codified into mathematical models for simulation with computers The first edition of the book offered that upon completion of an in depth study of its contents the modern approach of modelling and simulation in wastewater treatment plant design and operation could be embraced with deeper insight advanced knowledge and greater confidence be it activated sludge biological nitrogen and phosphorus removal secondary settling tanks or biofilm systems However the advances and developments in wastewater treatment have accelerated over the past 12 years since publication of the first edition While all the chapters of the first edition have been updated to accommodate these advances and developments some such as granular sludge membrane bioreactors sulphur conversion based bioprocesses and biofilm reactors which were new in 2008 have matured into new industry approaches and are also now included in this second edition The target readership of this second edition remains the young water professionals who will still be active in the field of protecting our precious water resources long after the aging professors who are leading some of these advances have retired The authors all still active in the field are aware that cleaning dirty water has become more complex but that it is even more urgent now than 12 years ago and offer this second edition to help the young water professionals engage with the scientific and bioprocess engineering principles of wastewater treatment science and technology with deeper insight advanced knowledge and greater confidence built on stronger competence

Enhanced coagulation and enhanced precipitative softening guidance manual ,1999 **watermaths** Simon Judd ,2019-11-15 Watermaths presents the mathematics underpinning the design and operation of the individual unit process technologies used for purifying water and wastewater The book aims to provide the reader with sufficient information to enable them to tackle the most important calculations in this area without requiring any prior knowledge of the subject and assuming only a very basic grounding in science or engineering It focuses on the most essential areas of knowledge required containing tuition in basic numeracy chemistry process engineering and fluid physics as well as cost analysis The simple and succinct delivery is designed to get the reader up to speed as rapidly as possible sufficient background information is provided to explain the purpose of the calculations and ultimately tackle the complete wastewater reclamation plant design problem included in the book Example calculations are provided within each chapter each followed by exercises intended to reinforce the learning and for which solutions are appended Exercises range in difficulty from simple single calculational step

problems to more complex ones and the over arching design problem provides some context to the mathematics The book can be understood by those relatively new to the water sector and is intended as a primer rather than a comprehensive handbook It is nonetheless sufficiently comprehensive to permit design calculations for most water and wastewater treatment unit processes Core disciplines covered include manipulation of equations including logarithmic and exponential expressions fluid physics for describing flow through pipes channels and filters chemical concentrations and chemical biochemical reactions chemical biochemical reaction kinetics mass balance for determining fate of materials through unit processes mass transfer for determining transfer of materials across boundaries within processes reactor theory for designing biochemical and chemical reaction vessels cost analysis including capital and operating expenditure with discounting New to the third edition new chapter on cost analysis further explanation of the classical unit operations types illustrations expanded to include unit operation schematics and symbols new examples and exercises updated design problem Watermaths just add water Agro-Environmental Sustainability in MENA Regions Mohamed Abu-hashim,Faiza Khebour Allouche,Abdelazim Negm,2021-10-11 This book focuses on the status quo and the latest information on the water soil agriculture nexus in the MENA countries It presents several case studies and applications from e g Morocco Algeria Tunisia Egypt and Jordan while also sharing and discussing the latest findings The content includes a range of agriculture related topics that focus on water resources management impacts of climate change and wastewater treatment for reuse in agriculture sectors in addition sustainable approaches to agricultural based industry organic crop production crop water requirements and soil environment are discussed in an updated and comprehensive review In turn the book discusses the applications of GIS and remote sensing as a new technology for better agriculture management as well as its use in Egypt as a representative country In closing it considers the implementation of an environmental information system in data scarce MENA countries from the standpoint of the water food nexus and addresses the question of climate justice in the MENA region Exploring various dimensions of MENA country based case studies on achieving sustainable agriculture the book offers an invaluable source of topical information for agricultural sustainability related stakeholders in the region researchers and graduate students alike **Water Quality Instructional Resources Information System (IRIS)** ,1979
