

Waves and Vibrations**Wave Mechanics Simulation**

Water Waves in an Electric Sink

Purpose

To observe and control waves in a ripple tank simulation to learn the basics of wave mechanics

Apparatus

computer

PhET simulation: "Wave Interference" (available at <http://phet.colorado.edu>)

Discussion

The ripple tank was an effective (though cumbersome) classroom device used for demonstrating and exploring wave phenomena. A simple version is shown on page 511 in your textbook. More elaborate ones resembled a small glass table with raised edges. Water was poured onto the table and kept from spilling by the raised edges. Typically, a strong point light source was placed above the tank and shadows of ripples could be seen below the tank. A small ball attached to a motor bobbed in and out of the water to make waves with consistent amplitude and wavelength.

A variety of wave phenomena could be demonstrated using the ripple tank. This activity uses a ripple tank simulation, so you'll be able to investigate waves without the water.

Procedure**PART A: CRESTS AND TROUGHS**

Step 1: When the simulation opens, you will see a faucet dripping water into a large sink. The drops create ripples in the water in the sink.

Step 2: Locate the "Rotate View" slider in the control panel on the right side of the window. Drag the slider to the right. Doing so rotates your view of the sink from a top view to a side view.

Step 3: Locate the "Pause" button at the bottom of the window. Try to pause the animation when the water under the faucet rises to its highest point (close to or touching the faucet, itself).

Step 4: Locate the "Show Graph" button below the blue water of the ripple tank. Click it to activate the graph. Notice that the graph and the side view of the water match each other.

Step 5: Slide the "Rotate View" slider back to the left so that it shows the top view of the water.
