realized that the linear economic model is not sustainable in the long run and cannot sustain the life standards. The new circular economy approach that is already under discussion suggests the adjustment of our priorities and the re-orientation of the future infrastructure investments. In this context, we are looking for new innovative and sustainable solutions to increase the resiliency of our societies to protect and restore the ecosystems and to maintain the necessary economic growth without further undermining the planet's boundaries. The well-being of coming generations will depend on our ability to adapt our economies to this challenge. In particular, transforming today's cities into sustainable cities is one of the main adaptations that will be necessary. A holistic approach looking at cities from a system's perspective is needed to achieve this goal. Nature-based solutions (NbS) serve exactly this ambitious and multi-factorial purpose due to their inherent ability not only to tackle climate change but also to provide a series of ecosystem services and social benefits. In the urban context, NbS can deal with main challenges such as urban heat islands, flooding, treatment of wastewater and runoff, and food provision. At the same time, NbS can provide a series of ecosystem services beneficial for the environment and the society, including clean water production, nutrient recovery, heavy metals retention, and a broad range of plant-based materials. In the new circular economy paradigm, NbS can contribute to strategies for climate change adaptation and create a holistic resource management system for the urban biosphere. Thus, this book aims at providing a single reference that discusses the role and effectiveness of NbS in the urban environment and how these systems can contribute to the circular management of water, nutrients, and resources towards resilient, sustainable, and healthy cities. The scope of the book extends to various fields and disciplines such as the built environment, urban water and wastewater resource recovery, urban farming, smart sensing, research and development, technology and innovation, society and governance. Research studies, pilot projects, and case studies are part of the book.

Principles of Water Treatment Kerry J. Howe, David W. Hand, John C. Crittenden, R. Rhodes Trussell, George Tchobanoglous, 2012-11-06. *Principles of Water Treatment* has been developed from the best-selling reference work *Water Treatment* 3rd edition by the same author team. It maintains the same quality writing, illustrations, and worked examples as the larger book but in a smaller format which focuses on the treatment processes and not on the design of the facilities.

Selected Water Resources Abstracts, 1991-03. Sustainability of Irrigated Agriculture L.S. Pereira, R.A. Feddes, J.R. Gilley, B. Lesaffre, 2013-03-09. Irrigated agriculture and the use of water resources in agriculture face the challenges of sustainable development. Research has advanced our knowledge of water use by crops, soil-water-solutes interactions, and the engineering and managerial tools needed to mobilize, convey, distribute, control, and apply water for agricultural production. However, the achievements booked in user practice have revealed the need for new developments in the areas of resource conservation, control of environmental and health impacts, modernisation of technologies, and management, economic viability, and the social acceptance of changes. The contributions to *Sustainability of Irrigated Agriculture* cover most of the relevant disciplines. Besides its multidisciplinary nature, the different origins, experience, backgrounds

and practices of the authors provide a wide in depth analysis of the various aspects of water resource utilization in agriculture The papers review scientific technical and managerial aspects highlighting the main problems issues and future developments The book covers the different aspects of sustainability including environmental technical economic institutional and social ones Advances in irrigation science and engineering are dealt with both on and off farm Special attention is paid to the different components of water quality management to the transfer of technology and to capacity building
