SECTION 17.1 LIQUID WATER AND ITS PROPERTIES (pages 475–478)

This section explains the hydrogen bonding that occurs in water molecules and how high surface tension and low vapor pressure can be explained in terms of hydrogen bonding.

► The Water Molecule (pages 475–476)

1. What unique molecular compound is the foundation of all life on Earth?

water

2. Approximately what fraction of Earth's surface is covered in water? 3/4

3. Circle the letter next to each sentence that is true concerning water molecules.

- a. Each O — H covalent bond in a water molecule is nonpolar.
☒ b. In a water molecule, the less electronegative hydrogen atoms acquire a slight positive charge and the oxygen atom acquires a slight negative charge.
☒ c. Because the water molecule has an H — O — H bond angle of 105° , the molecule as a whole is polar.

4. The diagram below depicts a water molecule. Complete the labels showing the locations of the hydrogen atoms, the oxygen atom, and the regions of positive and negative charge.

Aqueous Systems at Elevated Temperatures and Pressures Roberto Fernandez-Prini,A.H. Harvey,D.A. Palmer,2004-07-06 The International Association for the Properties of Water and Steam IAPWS has produced this book in order to provide an accessible up to date overview of important aspects of the physical chemistry of aqueous systems at high temperatures and pressures These systems are central to many areas of scientific study and industrial application including electric power generation industrial steam systems hydrothermal processing of materials geochemistry and environmental applications The authors goal is to present the material at a level that serves both the graduate student seeking to learn the state of the art and also the industrial engineer or chemist seeking to develop additional expertise or to find the data needed to solve a specific problem The wide range of people for whom this topic is important provides a challenge Advanced work in this area is distributed among physical chemists chemical engineers geochemists and other specialists who may not be aware of parallel work by those outside their own specialty The particular aspects of high temperature aqueous physical chemistry of interest to one industry may be irrelevant to another yet another industry might need the same basic information but in a very different form To serve all these constituencies the book includes several chapters that cover the foundational thermophysical properties such as gas solubility phase behavior thermodynamic properties of solutes and transport properties that are of interest across numerous applications The presentation of these topics is intended to be accessible to readers from a variety of backgrounds Other chapters address fundamental areas of more specialized interest such as critical phenomena and molecular level solution structure Several chapters are more application oriented addressing areas such as power cycle chemistry and hydrothermal synthesis As befits the variety of interests addressed some chapters provide more theoretical guidance while others such as those on acid base equilibria and the solubilities of metal oxides and hydroxides emphasize experimental techniques and data analysis Covers both the theory and applications of all Hydrothermal solutions Provides an accessible up to date overview of important aspects of the physical chemistry of aqueous systems at high temperatures and pressures The presentation of the book is understandable to readers from a variety of backgrounds

Resources Andrea Scozzari, Elissavet Dotsika, 2015-11-27 This book focuses on scientific and technological aspects of groundwater resources assessment and surveillance. It describes relevant risks and investigates selected techniques for the monitoring and mitigation of the individuated threats to groundwater quality. The authors discuss the concepts of groundwater resources protection and offer examples of both geogenic and anthropogenic degradation of groundwater quality such as heavy metals from mining activities and natural water rock interactions as well as risk of contamination due to geological CO₂ storage practices etc. The volume also covers non invasive monitoring techniques and briefly addresses innovative sensor technologies for the online assessment of water quality. Furthermore the role played by geochemical techniques, the potential of environmental isotopes and the support provided by physical modelling are highlighted. The chapters guide the reader through various viewpoints according to the diverse disciplines involved without aiming to be exhaustive but instead picking representative topics for their relevance in the context of groundwater protection and control. This book will be of interest to advanced students, researchers, policy makers and stakeholders at various levels.
