Mechanisms of Genome Protection and Repair Dmitry O. Zharkov,2020-05-07 DNA is under constant challenge from environmental and endogenous metabolic assaults Several layers of defence and repair systems allow cells to maintain stable genomes in humans dysfunction of these systems leads to cancer neurodegeneration and other pathologies At the same time recently it had emerged that targeted and regulated DNA damage and repair is a mechanism underlying several important cellular processes such as epigenetic demethylation and immunoglobulin gene diversification The present collection of papers is aimed to cover new developments in the area of protective and regulatory mechanisms associated with DNA damage The mechanisms ruling the recognition of damaged nucleotides against the vast background of normal ones are reviewed The role of extended non catalytic domains that are often found in eukaryotic DNA repair proteins in contrast to their downsized catalytic only bacterial counterparts is discussed Among the proposed subjects are the regulatory functions of bulky covalent modifications such as poly ADP ribosylation and ubiquitylation in DNA damage response especially in the context of chromatin remodelling As opposed to DNA repair damage tolerance allows cells to replicate with lesions in the genome the enzymes responsible are also covered Finally we present examples of modern multilevel understanding of the cell function and malfunction in the wake of genotoxic assaults such as oxidative stress abiotic environmental stress and DNA damaging plant toxins

Protein-Nucleic Acid Interactions Phoebe A Rice,Carl C Correll,2008-04-22 The structural biology of protein nucleic acid interactions is in some ways a mature field and in others in its infancy High resolution structures of protein DNA complexes have been studied since the mid 1980s and a vast array of such structures has now been determined but surprising and novel structures still appear quite frequently High resolution structures of protein RNA complexes were relatively rare until the last decade Propelled by advances in technology as well as the realization of RNA s importance to biology the number of example structures has ballooned in recent years New insights are now being gained from comparative studies only recently made possible due to the size of the database as well as from careful biochemical and biophysical studies As a result of the explosion of research in this area it is no longer possible to write a comprehensive review Instead current review articles tend to focus on particular subtopics of interest This makes it difficult for newcomers to the field to attain a solid understanding of the basics One goal of this book is

therefore to provide in depth discussions of the fundamental principles of protein nucleic acid interactions as well as to illustrate those fundamentals with up to date and fascinating examples for those who already possess some familiarity with the field The book also aims to bridge the gap between the DNA and the RNA views of nucleic acid protein recognition which are often treated as separate fields However this is a false dichotomy because protein DNA and protein RNA interactions share many general principles This book therefore includes relevant examples from both sides and frames discussions of the fundamentals in terms that are relevant to both The monograph approaches the study of protein nucleic acid interactions in two distinctive ways First DNA protein and RNA protein interactions are presented together Second the first half of the book develops the principles of protein nucleic acid recognition whereas the second half applies these to more specialized topics Both halves are illustrated with important real life examples The first half of the book develops fundamental principles necessary to understand function An introductory chapter by the editors reviews the basics of nucleic acid structure Jen Jacobsen and Jacobsen discuss how solvent interactions play an important role in recognition illustrated with extensive thermodynamic data on restriction enzymes Marmorstein and Hong introduce the zoology of the DNA binding domains found in transcription factors and describe the combinatorial recognition strategies used by many multiprotein eukaryotic complexes Two chapters discuss indirect readout of DNA sequence in detail Berman and Lawson explain the basic principles and illustrate them with in depth studies of CAP while in their chapter on DNA bending and compaction Johnson Stella and Heiss highlight the intrinsic connections between DNA bending and indirect readout Horvath lays out the fundamentals of protein recognition of single stranded DNA and single stranded RNA and describes how they apply in a detailed analysis of telomere end binding proteins Nucleic acids adopt more complex structures Lilley describes the conformational properties of helical junctions and how proteins recognize and cleave them Because RNA readily folds due to the stabilizing role of its 2 hydroxyl groups Li discusses how proteins recognize different RNA folds which include duplex RNA With the fundamentals laid out discussion turns to more specialized examples taken from important aspects of nucleic acid metabolism Schroeder discusses how proteins chaperone RNA by rearranging its structure into a functional form Berger and Dong discuss how topoisomerases alter the topology of DNA and relieve the superhelical tension introduced by other processes such as replication and transcription Dyda and Hickman show how DNA transposases mediate genetic mobility and Van Duyne discusses how site specific recombinases cut and paste DNA Horton presents a comprehensive review of the structural families and chemical mechanisms of DNA nucleases whereas Li in her discussion of RNA protein recognition also covers RNA nucleases Lastly Ferr D Amar shows how proteins recognize and modify RNA transcripts at specific sites The book also emphasises the impact of structural biology on understanding how proteins interact with nucleic acids and it is intended for advanced students and established scientists wishing to broaden their horizons *Ignition and Accessories* ,1905

The Molecular Basis of Viral Replication R. Bercoff, 2012-12-06 the discovery of the splicing of the gene transcripts the list would include the whole molecular genetics of the lambda bacteriophage the notions of promotor repressor and integration the discovery of the reverse flow of genetic information the very existence of oncogenes the S terminal cap structure of eukaryotic mRNAs Electron microscopy ultracentrifugation and tissue culture were the landmarks on the way of the young science During the past few years however a major and not so silent revolution took place recombinant DNA technology with all its might entered in our laboratories and restriction mapping of cloned genomes and sequencing gels have replaced plaque counting and sucrose gradients The new techniques have made it possible to dissect the entire genome of a virus at the molecular level and studies that would have been dreamt of just in the mid seventies became the everyday experiments of our days With new insight into the structure of viral genomes and a deeper understanding of the mechanisms that regulate their expression our view of viruses was bound to change this volume bears witness to this impressive advance

Operators and Promoters Harrison G. Echols, 2001-08-01 During the past four decades molecular biology has dominated the life sciences Curiously no participant in this scientific revolution has previously attempted a book length history of the development of this powerful science Harrison Hatch Echols provides such an account in *Operators and Promoters* A gifted molecular biologist and talented raconteur Echols relates the intellectual history of the most influential discoveries in molecular biology from his own experiences Echols joins his vast knowledge of biology with personal interviews of the principal operators and promoters in the field to convey a captivating side of science specifically how the personalities of scientists and their competitive and collaborative relations affect new ideas and discoveries The author reveals how logic and order often arise only in hindsight from the chaos of discovery eventual solutions often come from experiments performed for entirely different reasons Echols also shares his deep seated feelings for the science itself communicating his admiration even awe for the purity and simplicity with which life systems are organized This gripping insider s account of the first fifty years of molecular biology ties together the biological questions with the scientific solutions of the people who established the field It will appeal not only to students and those interested in the development of the discipline but to anyone intrigued by the human side of science and the process of scientific inquiry and discovery

Evolutionary Bioinformatics Donald R. Forsdyke, 2010-11-11 Books on bioinformatics which began appearing in the mid 80s primarily served gene hunters and biologists who wished to construct family trees showing tidy lines of descent Given the great pharmaceutical industry interest in genes this trend has continued in most subsequent texts These deal extensively with the exciting topic of gene discovery and searching databases but hardly consider genomes as information channels through which multiple forms and levels of information including genic information have passed through the generations Nucleic Acids Abstracts ,1996
