Theoretical Manual, 2004 *Rock Mechanics in Civil and Environmental Engineering* Jian Zhao, Vincent Labiouse, Jean-Paul Dudt, Jean-Francois Mathier, 2010-05-19 During the last two decades rock mechanics in Europe has been undergoing some major transformation The reduction of mining activities in Europe affects heavily on rock mechanics teaching and research at universities and institutes At the same time new emerging activities notably underground infrastructure construction geothermal energy develop

Performance-Based Seismic Design of Concrete Structures and Infrastructures Plevris, Vagelis, Kremmyda, Georgia, Fahjan, Yasin, 2017-02-14 Solid design and craftsmanship are a necessity for structures and infrastructures that must stand up to natural disasters on a regular basis Continuous research developments in the engineering field are imperative for sustaining buildings against the threat of earthquakes and other natural disasters Performance Based Seismic Design of Concrete Structures and Infrastructures is an informative reference source on all the latest trends and emerging data associated with structural design Highlighting key topics such as seismic assessments shear wall structures and infrastructure resilience this is an ideal resource for all academicians students professionals and researchers that are seeking new knowledge on the best methods and techniques for designing solid structural designs

Fracture and Fatigue Assessments of Structural Components Alberto Campagnolo, 2020-12-04 In dealing with fracture and fatigue assessments of structural components different approaches have been proposed in the literature They are usually divided into three subgroups according to stress based strain based and energy based criteria Typical applications include both linear elastic and elastoplastic materials and plain and notched or cracked components under both static and fatigue loadings The aim of this Special Issue is to provide an update to the state of the art on these approaches The topics addressed in this Special Issue are applications from nano to full scale complex and real structures and recent advanced criteria for fracture and fatigue predictions under complex loading conditions such as multiaxial constant and variable amplitude fatigue loadings
