String Art Math Geometry Concept:

Electronic String Art Stephen Erfle, 2024-02-20 String art is a well known and popular activity that uses string a board and nails to produce artistic images although there are variations that use different modalities This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds The downside of this highly tactile activity is that it is quite time consuming and rigid By contrast electronic string art offers much more flexibility to set up or change nail locations and counting rules and the images created from those changes change instantaneously Electronic String Art Rhythmic Mathematics invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise accessible explanations of the underlying mathematical principles regarding how the images were created and how they change Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry number theory and modular arithmetic from approximately 200 short interdependent sections Features Readers are able to drill down on images in order to understand why they work using short 1 to 2 page stand alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open ended inherently flexible teaching resource for elementary middle and high school level mathematics The most mathematically challenging sections or portions of a section are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises solutions and many online digital resources These QR codes take you to these digital resources One takes you directly to the web version of the string art model used as a starting point for teaching the parameters of the model in Section 25.5 The other takes you to the ESA web page with additional links to a variety of resources *Cool String Art: Creative Activities that Make Math & Science Fun for Kids!* Anders Hanson/Elissa Mann, 2014-09-01 Discover secret math and science tricks to creating art This title introduces young readers to the sciences with a creative twist Math and science educational pages are interspersed with Cool String Art activities that offer practical applications of the information students learn in class All activities include how to photos easy instructions and clear explanations Reinforce Common Core Standards in reading math and science while making cool art projects from string art polygons to planets and constellations Aligned to Common Core Standards and correlated to state standards Checkerboard Library is an imprint of ABDO Publishing Company *E-math Iii Tm' 2007 Ed.(geometry)* , Art Matters Eileen S. String Figures as Mathematics? Eric Vandendriessche,2015-01-02 This book addresses the mathematical rationality contained in the making of string figures It does so by using interdisciplinary methods borrowed from anthropology mathematics history and philosophy of mathematics The practice of string figure making has long been carried out in many societies and particularly in those of oral tradition It consists in applying a succession of operations to a string knotted into a loop mostly using the fingers and sometimes the feet the wrists or the mouth This succession of operations is intended to generate a final figure The book explores different modes of conceptualization of the practice of string figure making and analyses various source material through these conceptual tools it looks at research by mathematicians as well as ethnographical publications and personal fieldwork findings in the Chaco Paraguay and in the Trobriand Islands Papua New Guinea which all give evidence of the rationality that underlies this activity It concludes that the creation of string figures may be seen as the result of intellectual processes involving the elaboration of algorithms and concepts such as operation sub procedure iteration and transformation *Mandala String Art* Dennis Rozema,2020-09-11 You don t have to be a math wiz or even good at geometry to learn how to draw fractals spirals and tori This book shows you how Beautifully illustrated cover to cover with over a hundred full color pictures and 800 drawings We begin with an infinitely small point where all emanates The most basic form of expansion from this origin is a circle When dividing this simple shape equally and connecting these points continuously beautiful patterns emerge As it turns out it s possible to draw the resulting geometry with a single line starting and ending at the same point From this concept we create Mandala String Art Tibetan Buddhists define Mandala as

an integrated structure organized around a unifying center The word itself is ancient Sanskrit synonymous with circle This is the language of Sacred Geometry Starting with a dot and expanding to a circle creating the Circumpunct then dividing equally and connecting these new points we create the symbols of ancient religion and philosophy Geometry provided God with a model for the Creation Johannes Kepler Pythagoreans used the circled dot to represent the first metaphysical being the Monad or The Absolute and in Neoplatonism the universe emanated from this The One also named Bindu the sacred symbol of the cosmos in its unmanifested state **Differentiated Instruction Using Technology** Amy
