sectional response is also included. The unified and integrated approach to determine axial flexural capacity of cross sections is utilized in development of P-M and M-M interaction diagrams of cross sections of various shapes. The behavior and design of cross sections subjected to shear and torsion is also included with emphasis on reinforced concrete sections. Several detailed flow charts are included to demonstrate the procedures used in ACI-BS and Euro codes for design of cross section subjected to shear and torsion followed by solved examples. The book also presents the discussion about various factors that can lead to ductile response of cross sections especially those made of reinforced concrete. The definition and development of action-deformation curves especially moment-curvature curve is discussed extensively. Various factors such as confinement, rebar distribution and axial load effect on the ductility are shown through examples. The use of moment-curvature curve to compute various section response parameters is also explained through equations and examples. Several typical techniques and materials for retrofitting of cross sections of reinforced concrete beams, columns and slabs etc are reviewed. A brief discussion of various informative references related to the evaluation and retrofitting of structures is included for practical applications. Towards the end, the book provides an overview of various software applications available for cross section design and analysis. A framework for the development of a general purpose cross section analysis software is presented and various features of few commercially available software packages are compared using some example cross sections.
