Fine Structure of Crayfish Optic Ganglia, 1967 Fine Structure of Crayfish Optic Ganglia Homer B. Latimer, 1967 Structure and Function of the

Crayfish Phasic Flexor Neuromuscular System Thomas H. Brown, 1976 **The Fine Structure of the Arthrobranch of the Crayfish, *Pacifastacus leniusculus* Dana, with Special Reference to Active Ion Uptake** Howard Curtis Morse, 1967

The gills of an Oregon crayfish *Pacifastacus leniusculus* Dana were examined with histological and histochemical techniques and their fine structure was investigated by electron microscopy Special attention was given to the structural basis of active ion uptake The histology of these gills was the same as that of other crayfish species described by earlier workers There are basically three cell types hypodermal cells of stalk and tubules connective tissue cells and nephrocytes In addition two cell products are present the cuticle and connective tissue fibers The hypodermal cells of the stalk combine into a solid sheet underlying the cuticle while those of the tubules are pear shaped with a body neck and cytoplasmic sheet The body containing the nucleus continues into a smaller neck which flares out into the flattened sheet running perpendicular to the length of the neck but parallel to and closely apposed to the cuticle Nephrocytes are large multinucleate phagocytes attached to the walls of efferent vessels of the stalk and tubules as well as the stalk mantle canal These cells are found to contain much acid phosphatase activity Electron microscopy reveals that the nephrocytes are covered on the surface with a system of long microvilli which drape over cis ternae The plasma membrane delimits the inner surface of the cis ternae on which numerous micropinocytotic vesicles can be seen in favorable sections Within the cytoplasm are dense bodies vesicles resembling micropinocytotic vesicles peripheral vacuoles and large central vacuoles Dictyosomes and large mitochondria

with few cristae and of low electron density are occasionally seen It is suggested that material which is phagocytized by micropinocytosis may be combined with dense bodies which may contain lytic enzymes to form peripheral and thence central vacuoles where intracellular digestion would occur The surface position of the hypodermal cells of the stalk or tubules makes them both likely candidates for a role in active ion uptake The apparent lesser density of the tubule cuticle and greater abundance of mitochondria in the pear shaped hypodermal cells of the tubules compared with the stalk cuticle and hypodermis indicates that the pear shaped cells are more likely involved in such a process Chloride localization with silver salts at the organ level indicates that the cuticle of tubules arising from the base and midsection of a gill stalk are strikingly more ion permeable than tubules from the tip the stalk or other parts of the whole body surface This permeability difference correlates with a fine structure difference in tubular cuticle and pear shaped cells depending upon their location The cytoplasmic sheet of pear shaped cells from the gill tip is thinner and may contain fewer mitochondria while the cuticle in this region has an epicuticle of higher electron density Chloride localization with silver acetate at the fine structure level somewhat suggests the same base to tip differentiation and shows localization of the precipitated silver at the outer membrane of pear shaped cells and cytoplasmic sheet This suggests that the chloride pump is located in the outer membrane of the pear shaped cells and cytoplasmic sheet located in the tubules of the lower half of the gills

Variation and Correlation in the Crayfish Raymond Pearl, Arthur Brooks Clawson, 2016-05-24 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant
