Mathematical Methods for Signal and Image Analysis and Representation Luc Florack, Remco Duits, Geurt Jongbloed, Marie-Colette van Lieshout, Laurie Davies, 2012-01-12 Mathematical Methods for Signal and Image Analysis and Representation presents the mathematical methodology for generic image analysis tasks In the context of this book an image may be any m dimensional empirical signal living on an n dimensional smooth manifold typically but not necessarily a subset of spacetime The existing literature on image methodology is rather scattered and often limited to either a deterministic or a statistical point of view In contrast this book brings together these seemingly different points of view in order to stress their conceptual relations and formal analogies Furthermore it does not focus on specific applications although some are detailed for the sake of illustration but on the methodological frameworks on which such applications are built making it an ideal companion for those seeking a rigorous methodological basis for specific algorithms as well as for those interested in the fundamental methodology per se Covering many topics at the forefront of current research including anisotropic diffusion filtering of tensor fields this book will be of particular interest to graduate and postgraduate students and researchers in the fields of computer vision medical imaging and visual perception

Computer Vision - ECCV 2008 David Forsyth, Philip Torr, Andrew Zisserman, 2008-10-11 Welcome to the 2008 European Conference on Computer Vision These proceedings are the result of a great deal of hard work by many people To produce them a total of 871 papers were reviewed Forty were selected for oral presentation and 203 were selected for poster presentation yielding acceptance rates of 4.6% for oral 23.3% for poster and 27.9% in total We applied three principles First since we had a strong group of Area Chairs the final decisions to accept or reject a paper rested with the Area Chair who would be informed by reviews and could act only in consensus with another Area Chair Second we felt that authors were entitled to a summary that explained how the Area Chair reached a decision for a paper Third we were very careful to avoid conflicts of

interest Each paper was assigned to an Area Chair by the Program Chairs and each Area Chair received a pool of about 25 papers The Area Chairs then identified and ranked appropriate reviewers for each paper in their pool and a constrained optimization allocated three reviewers to each paper We are very proud that every paper received at least three reviews At this point authors were able to respond to reviews The Area Chairs then needed to reach a decision We used a series of procedures to ensure careful review and to avoid conflicts of interest Program Chairs did not submit papers The Area Chairs were divided into three groups so that no Area Chair in the group was in conflict with any paper assigned to any Area Chair in the group
