application's performance critical sections and only later turns towards isolating and resolving these real performance bottlenecks. This is in my opinion one of the most important tasks and also one of the most complex ones when working with large scale applications. And now read on and enjoy the ride to the better side of a 30 fold performance difference. Ingo Rammer, author of *Advanced .NET Remoting*, Vienna, Austria. <http://www.ingorammer.com>. About the Book: *Maximizing .NET Performance* is the first book dedicated entirely to providing developers and architects with information on .NET Framework performance. .NET is a technology with a vast surface area and coverage of every aspect of performance relevant to all .NET technologies is not possible within a single volume. This book concentrates on the performance of .NET Framework technologies like garbage collection, .NET Remoting and Code Access Security. Because these technologies form the building blocks upon which all .NET applications run, the information in this book is relevant to all .NET developers. In addition to providing high level material on achieving software with good performance characteristics, the book aims to enhance your knowledge of the design and implementation of the framework and to provide the tools and techniques to allow you to conduct your own investigation into performance problems. Rather than taking a tips and tricks approach, the book aims to provide a detailed exploration of each topic and explore the why and by how much aspects of performance that are often overlooked.

Programming ASP.NET Jesse Liberty, Dan Hurwitz, 2003. ASP.NET, successor to Microsoft's Active Server Pages (ASP), is so complete and flexible that a web developer's main difficulty may lie simply in weaving the pieces together for maximum efficiency. The new edition of *Programming ASP.NET* shows developers how to do just that. Updated for Version 1.1 of the .NET framework and Visual Studio .NET 2003, the second edition of this bestselling .NET title will show you how to create dynamic, data-driven web sites and services using both C# and Visual Basic .NET.
