Geomicrobes: Life in Terrestrial Deep Subsurface Malin Bomberg, Lasse Ahonen, 2017-07-17 The deep subsurface is in addition to space one of the last unknown frontiers to human kind A significant part of life on Earth resides in the deep subsurface hiding great potential of microbial life of which we know only little The conditions in the deep terrestrial subsurface are thought to resemble those of early Earth which makes this environment an analog for studying early life in addition to possible extraterrestrial life in ultra extreme conditions Early microorganisms played a great role in shaping the conditions on the young Earth Even today deep subsurface microorganisms interact with their geological environment transforming the conditions in the groundwater and on rock surfaces Essential elements for life are richly present but in difficultly accessible form The elements driving the microbial deep life is still not completely identified Most of the microorganisms detected by novel molecular techniques still lack cultured representatives Nevertheless using modern sequencing techniques and bioinformatics the functional roles of these microorganisms are being revealed We are starting to see the differences and similarities between the life in the deep subsurface and surface domains We may even begin to see the function of evolution by comparing deep life to life closer to the surface of Earth Deep life consists of organisms from all known domains of life This Research Topic reveals some of the rich diversity and functional properties of the great biomass
