Rose, Rhys Jones, 2003-01-23 The availability of efficient and cost effective technologies to repair or extend the life of aging military airframes is becoming a critical requirement in most countries around the world as new aircraft becoming prohibitively expensive and defence budgets shrink To a lesser extent a similar situation is arising with civil aircraft with falling revenues and the high cost of replacement aircraft This book looks at repair reinforcement technology which is based on the use of adhesively bonded fibre composite patches or doublers and can provide cost effective life extension in many situations From the scientific and engineering viewpoint whilst simple in concept this technology can be quite challenging particularly when used to repair primary structure This is due to it being based on interrelated inputs from the fields of aircraft design solid mechanics fibre composites structural adhesive bonding fracture mechanics and metal fatigue The technologies of non destructive inspection NDI and more recently smart materials are also included Operational issues are equally critical including airworthiness certification application technology including health and safety issues and training Including contributions from leading experts in Canada UK USA and Australia this book discusses most of these issues and the latest developments Most importantly it contains real histories of application of this technology to both military and civil aircraft *Aircraft Accident Report ,197?* *AIR CRASH INVESTIGATIONS: JAMMED RUDDER KILLS 132, The Crash of USAir Flight 427* Hank Williamson, editor, 2011-10 The Boeing 737 has a history of rudder system related anomalies including numerous instances of jamming A number of accidents and incidents were the result of the airplanes unexpected movement of their rudders During the course of the four and a half year investigation of the crash of USAir Flight 427 near Aliquippa Pennsylvania killing 132 people the NTSB discovered that the PCU s dual servo valve could jam as well as deflect the rudder in the opposite direction of the pilots input due to thermal shock caused when cold PCUs are injected with hot hydraulic fluid This finally solved the mystery of sudden jamming of the rudders of this aircraft

The Airliner Cabin Environment and the Health of Passengers and Crew National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Air Quality in Passenger Cabins of Commercial Aircraft, 2002-02-03 Although poor air quality is probably not the hazard that is foremost in people's minds as they board planes it has been a concern for years. Passengers have complained about dry eyes, sore throat, dizziness, headaches, and other symptoms. Flight attendants have repeatedly raised questions about the safety of the air that they breathe. *The Airliner Cabin Environment and the Health of Passengers and Crew* examines in detail the aircraft environmental control systems, the sources of chemical and biological contaminants in aircraft cabins, and the toxicity and health effects associated with these contaminants. The book provides some recommendations for potential approaches for improving cabin air quality and a surveillance and research program.
