The Fontan Circulation: Problems and Solutions Marc Gewillig, Yves D'Udekem, Jack Rychik, Ruth Heying, 2022-11-18

Cardiovascular System and Physical Exercise Victor L. Karpman, 1987-05-31 This book focuses on adaptation and control of the cardiovascular system along with myocardial and vascular reactions that provide the optimal blood flow under physical activity New information on the main hemodynamic values measured with the help of updated methods used in the research of heart and great vessels is described and a number of new parameters such as arterial impedance are introduced The information presented in this book is of value to research cardiologists experts in sports medicine and physiology as well as for physicians and physiologists connected with the use of muscular activity **Blood Pressure** Aise Seda

Artis, 2018-11-14 Since the discovery of blood pressure by Stephen Hales in 1733 scientific interest in blood pressure regulation particularly in hypertensive population has not lost its popularity The importance of the interactive effects of blood pressure shifts in different clinical conditions is well understood We know many contributing factors regulate the pressure of the blood within the arteries However crucial blood pressure control and the exact mechanisms involved are still under debate The present book aims to cover blood pressure from its measurement to various factors of its control with valuable contributions from different authors in the light of contemporary data from bench to bed *Mathematical and Numerical*

Modeling of the Cardiovascular System and Applications Daniele Boffi, Luca F. Pavarino, Gianluigi Rozza, Simone Scacchi, Christian Vergara, 2018-11-03 The book comprises contributions by some of the most respected scientists in the field of mathematical modeling and numerical simulation of the human cardiocirculatory system It covers a wide range of topics from the assimilation of clinical data to the development of mathematical and computational models including with parameters as well as their efficient numerical solution and both in vivo and in vitro validation It also considers applications of relevant clinical interest This book is intended for graduate students and researchers in the field of bioengineering applied mathematics computer computational and data science and medicine wishing to become involved in the highly fascinating task of modeling the cardiovascular system Computer Algebra Recipes Richard Enns, George C. McGuire, 2013-03-07

Computer algebra systems have the potential to revolutionize the teaching of and learning of science Not only can students work thorough mathematical models much more efficiently and with fewer errors than with pencil and paper they can also work with much more complex and computationally intensive models Thus for example in studying the flight of a golf ball students can begin with the simple parabolic trajectory but then add the effects of lift and drag of winds and of spin Not only can the program provide analytic solutions in some cases it can also produce numerical solutions and graphic displays Aimed at undergraduates in their second or third year this book is filled with examples from a wide variety of disciplines including biology economics medicine engineering game theory physics chemistry The text is organized along a spiral revisiting general topics such as graphics symbolic computation and numerical simulation in greater detail and more depth at each

turn of the spiral The heart of the text is a large number of computer algebra recipes These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination Associated with each recipe is a scientific model or method and a story that leads the reader through steps of the recipe Each section of recipes is followed by a set of problems that readers can use to check their understanding or to develop the topic further *The Global Circulation of the Atmosphere* Tapio Schneider, Adam H. Sobel, 2022-12-13 Despite major advances in the observation and numerical simulation of the atmosphere basic features of the Earth's climate remain poorly understood Integrating the available data and computational resources to improve our understanding of the global circulation of the atmosphere remains a challenge Theory must play a critical role in meeting this challenge This book provides an authoritative summary of the state of the art on this front Bringing together sixteen of the field's leading experts to address those aspects of the global circulation of the atmosphere most relevant to climate the book brings the reader up to date on the key frontiers in general circulation theory including the nonlinear and turbulent global scale dynamics that determine fundamental aspects of the Earth's climate While emphasizing theory as expressed through relatively simple mathematical models it also draws connections to simulations with comprehensive general circulation models Topics include the dynamics of storm tracks interactions between wave dynamics and the hydrological cycle monsoons tropical and extratropical dynamics and interactions and the processes controlling atmospheric humidity An essential resource for graduate students in atmospheric ocean and climate sciences and for researchers seeking an overview of the field *The Global Circulation of the Atmosphere* sets the standard for future research in a science that stands at a critical juncture With a foreword by Edward Lorenz the book includes chapters by Christopher Bretherton Kerry Emanuel Isaac Held David Neelin Raymond Pierrehumbert Håkan Held and Romy Roca Alan Plumb Walter Robinson Tapio Schneider Richard Seager and David Battisti Adam Sobel Kyle Swanson and Pablo Zurita Gotor and Richard Lindzen

INTRODUCTION TO BIOMEDICAL INSTRUMENTATION MANDEEP SINGH, 2010-08-23 This book presents a detailed introduction to the fundamental principles and applications of biomedical instrumentation It is intended as a textbook for the undergraduate students of Instrumentation Electronics and Electrical Engineering for a course in biomedical instrumentation as part of their programmes The book familiarizes the students of engineering with the basics of medical science by explaining the relevant medical terminology in simple language Without presuming prior knowledge of human physiology it helps the students to develop a substantial understanding of the complex processes of functioning of the human body The mechanisms of all major biomedical instrumentation systems ECG EEG CT scanner MRI machine pacemaker dialysis machine ultrasound imaging machine laser lithotripsy machine defibrillator and plethysmograph are explained comprehensively A large number of illustrations are provided throughout the book to aid in the development of practical understanding of the subject matter Chapter end review questions help in testing the students grasp of the underlying concepts

Technical Aerospace Reports, 1990 *In Defense of an Evolutionary Concept of Health* Dr Mahesh Ananth, 2012-10-01

One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety **Kaplan PCAT 2016-2017**
