

Circulatory System GIZMO

Name: _____

Date: 2/28/2021

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary:

- circulatory system, red blood cell, white blood cell, platelet
- blood vessel, artery, vein, capillary, pulmonary artery, pulmonary vein
- heart, atrium, ventricle, heart valves

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Why do you need blood? Blood carries oxygen to vital (and non-vital) systems in the body. As we learned in cell respiration, our body needs oxygen to create ATP.
2. What organ pushes blood through your body? The Heart

Gizmo Warm-up

This Gizmo shows the **heart** and **blood vessels** that make up the **circulatory system**. Look at the heart.

1. How many chambers does the heart have? 4
2. Turn on **Show labels**. What are the names of the chambers?

Right Atrium

Left Atrium

Right Ventricle

Left Ventricle

3. Find the tiny "doors" that open and close as blood is pumped through the heart. How many of these can you find? 4

These are **heart valves**. Heart valves stop blood from flowing backwards in the heart.

4. Click **Heartbeat sound** and listen for the two parts of the heartbeat, nicknamed "lub" and "dub." Observe the heart. (Note: The recording is not in sync with the heart animation.)

What do you think causes heartbeat sounds?

The pressure/force of the heart pumping all that blood throughout the body.

In fact,

- the "**lub**" sound is caused by valves from the **atria** to the **ventricles** closing.
- the "**dub**" sound is caused by the valves from the **ventricles** to the **blood vessels** closing.

5. The diagram is drawn as if you are face-to-face with the person with this heart. Why are the left atrium and left ventricle shown on the right side of the diagram?

When you are facing someone, their left is my right, and my right is their left. The difference is caused by our opposing orientations.

Noninvasive Vascular Diagnosis Ali F. AbuRahma, 2017-10-02 This large format book is the definitive text on vascular surgery written by expert editors and contributors. It is well supported by exceptional illustrative material. The book is invaluable to all those who work in vascular laboratories as well as internists, cardiologists, vascular laboratory directors, and staff general surgeons involved in vascular surgery and the vascular surgery community in general. Noninvasive Vascular Diagnosis comprehensively covers all aspects of noninvasive evaluation of the circulatory system in the extremities. The increasing popularity of noninvasive techniques is not reflected in the number of comprehensive works on the topic and it is clear from the success of the first edition that the demand for an updated volume is increasing.

Heaving, Stretching and Spicing Modes Rui Xin Huang, 2020-08-20 This book is focused on fundamental aspects of climate variability in the ocean in particular changes of the wind driven circulation. The vertical movement of isopycnal isothermal layers including their stretching and compression is called heaving and stretching. A major part of climate variability in the ocean is heaving in nature. Heave is primarily associated with the adiabatic motions of isopycnal layers due to change of wind stress. It is rather difficult to separate the contributions from adiabatic and diabatic processes. Isopycnal analysis has been widely used in climate study; however, it is much more accurate to study the isopycnal layers. Here climate signals are examined in terms of changes of layer depth, layer thickness, layer temperature, salinity, spicity, and others. In addition to the traditional Theta-S diagram, the sigma-pi potential density potential spicity diagram can also be used in analyzing water mass property distribution and climate variability. In fact, a radius of signal can be defined rigorously for signals in the sigma-pi diagram. The combination of isopycnal analysis and evaluation of radius of signal provides a powerful tool in analyzing climate variability in the world oceans.

,1996 [GO TO Objective NEET 2021 Biology Guide 8th Edition](#) Disha Experts, **In Defense of an Evolutionary Concept of Health** Dr Mahesh Ananth,2012-10-01 One of the most controversial contemporary debates on the concept of health is the clash between the views of naturalists and normativists Naturalists argue that although health can be valued or disvalued the concept of health is itself objective and value free In contrast normativists argue that health is a contextual and value laden concept and that there is no possibility of a value free understanding of health This debate has fueled many of the often very acrimonious disputations arising from the claims of health disease and disability activists and charities and the public policy responses to them In responding to this debate Ananth both surveys the existing literature with special focus on the work of Christopher Boorse and argues that a naturalistic concept of health drawing on evolutionary considerations associated with biological function homeostasis and species design is defensible without jettisoning norms in their entirety
