

Student Exploration: Star Spectra

Vocabulary: absorption spectrum, binary star, blueshift, Cepheid variable, emission spectrum, giant star, nebula, redshift, spectrum, star

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. What happens when light goes through a prism? Light bends and we can see a rainbow of colors.

This band of colors is called a **spectrum**.

2. A rainbow is an example of a spectrum. What is the sequence of colors in a rainbow?

Red, orange, yellow, green, blue, indigo, and violet.

Gizmo Warm-up

The interior of a **star** produces a continuous spectrum of light, like a rainbow. Cooler gases in the outer layers of the star absorb certain wavelengths of light, causing dark lines to appear in the spectrum. The resulting **absorption spectrum** can tell astronomers a great deal about the star.

1. On the Star Spectra Gizmo, turn on **Show labels**. Select **star 1** to see its absorption spectrum.

How many lines do you see in the spectrum? **10**

2. Drag the **Hydrogen** spectrum next to the **Star spectrum** so that the edges line up. Do some of the lines on the two spectra match up? **yes**

3. Drag the **Helium** spectrum next to the **Star spectrum**. Do some lines match? **yes**

4. Try out the other available spectra. Do any others have lines that match? **no**

5. Which elements have contributed to the spectrum of star 1? **hydrogen and helium**

Note: The elements in a star's spectrum do not necessarily reflect what the star is made of. The absorption spectrum is mostly determined by the surface temperature of the star.

The Philosophy of Cosmology Khalil Chamcham, Joseph Silk, John D. Barrow, Simon Saunders, 2017-04-13 Following a long term international collaboration between leaders in cosmology and the philosophy of science this volume addresses foundational questions at the limit of science across these disciplines questions raised by observational and theoretical progress in modern cosmology Space missions have mapped the Universe up to its early instants opening up questions on what came before the Big Bang the nature of space and time and the quantum origin of the Universe As the foundational volume of an emerging academic discipline experts from relevant fields lay out the fundamental problems of contemporary cosmology and explore the routes toward finding possible solutions Written for graduates and researchers in physics and philosophy particular efforts are made to inform academics from other fields as well as the educated public who wish to understand our modern vision of the Universe related philosophical questions and the significant impacts on scientific methodology *American Cinematographer* ,1990 **Garage Sale and Flea Market Annual** Bob Huxford, 2002-02 Packed with descriptions and current values for nearly 25 000 collectibles representing virtually every collectible category on today s market books sports cards ornaments toys cookie jars fifties glassware and movie memorabilia to name just a few More than 750 photos Related resources and a list of dealers included 8 5 x 11 512 pages 2003 values *Schroeder's Collectible Toys Antique to Modern Price Guide* Collector Books, Sharon Huxford, 2000-09 Of the many toy books on the market today only one tackles the enormous and varied field head on Schroeders Collectible Toys Antique to Modern This book has been highly acclaimed and enthusiastically accepted by toy collectors and dealers all over the country Backing the editors is a fantastic team of researchers and advisors who carefully check every line for up to the minute accuracy Though primarily a price guide the book also contains coded dealer listings devised to help the reader track down and purchase those hard to find items *The User's Directory of Computer Networks* ,1990 *The Compu-mark Directory of U.S. Trademarks* ,1988 *F&S Index United States Annual* ,1999 *Spectroscopy: The Key to the Stars* Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the

physical processes which shape lines in stellar spectra will find this book equally fascinating Spectroscopy Keith Robinson (B.A., Ph.D., F.R.A.S.), 2007 This text explains the physics and physical processes that cause the stellar spectra to be as they are Written specifically for amateur astronomers this book assumes only a basic knowledge of physics but looks in detail at many topics including energy levels in atoms the molecular spectra of red stars and emission lines in nebulae

Spectroscopy: The Key to the Stars Keith Robinson, 2007-01-16 This is the first non technical book on spectroscopy written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for them It is an ideal companion to existing books on observational amateur astronomical spectroscopy **Modern**
