

8.1 UNIVERSAL TRANSLATION

The technical ability to exchange data is not in itself sufficient to permit communication. A common set of symbols and concepts — a language — is equally important before communications can occur. This is difficult enough on a planet where individuals of the same species speak different languages, but it becomes a formidable task indeed when dealing with individuals from different planets who may share neither biology, culture, nor concepts.

The Universal Translator is an extremely sophisticated computer program that is designed to first analyze the patterns of an unknown form of communication, then to derive a translation matrix to permit accurate verbal or data exchanges. Although the Universal Translator is primarily intended to work with spoken communications, it has been used successfully for translation with a wide range of language media.

DERIVING A TRANSLATION MATRIX

The first step in deriving a translation matrix is to obtain adequate samples as possible of the unknown communication, otherwise possible. This sample should include examples of at least ten native speakers conversing with each other. Extensive pattern analysis yields estimates on symbology, syntax, usage patterns, vocabulary, and cultural factors. Given an adequate sample, it is usually possible to derive a highly

simplified language based on only a few minutes, although translation policy generally requires a much more extensive analysis before automatic usage of the Universal Translator is permitted.

In the case where the individual system communicated with has a similar language translation technology, it is sometimes useful to translate outgoing messages into the Linguistic language form, since this is specifically designed as a culturally neutral "intercultural" language medium.

LIMITATIONS

The accuracy and applicability of the translation matrix is only as good as the language sample on which the matrix is based. A limited sample will generally permit a basic exchange of concepts, but can lead to highly distorted translations when concepts, vocabulary, or usage vary too far from the sample. Since the Universal Translator constantly updates the translation matrix during the course of usage, it is often useful to allow the program to accumulate a larger linguistic sample by exchanging simple subjects before proceeding to the discussion of more complex or sensitive subjects.

Pullen, Michael J. Kennedy, 2018-10-04 Of the many issues facing special education and general education today it is difficult to imagine one more important or timely than response to intervention RTI Almost overnight RTI has become standard practice across the nation Unfortunately RTI remains ill defined falls far short of its evidence based practice goal is almost invariably misused and often results in more harm than good Nevertheless as a conceptual framework RTI has great potential for ensuring that students with disabilities receive appropriate evidence based instruction The mission of this handbook is to present a comprehensive and integrated discussion of response to intervention RTI and its relation to multi tiered systems of support MTSS in both special education and general education Although the two terms are currently used interchangeably distinct differences exist between them Therefore chapters are dedicated to distinguishing the two concepts RTI and MTSS and describing each one's unique role in
