Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Why do you need blood?

2. What organ pushes blood through your body?

Gizmo Warm-up

The *Circulatory System* Gizmo shows the **heart** and **blood vessels** that make up the **circulatory system**. Look at the heart.

1. How many chambers does the heart have?

2. Turn on **Show labels**. What are the names of the chambers?

3. Do you see tiny “doors” that open and close as blood is pumped through the heart?

These are **heart valves**. Heart valves control the flow of blood through the heart.

4. Click **Heartbeat sound** and listen for the two parts of the heartbeat, nicknamed “lub” and “dub.” Observe the heart. (Note: The recording is not in sync with the heart animation.)

What do you think causes heartbeat sounds?

In fact, the “lub” sound is caused by valves from the **atria** to the **ventricles** closing, and the “dub” sound is caused by the valves from the ventricles to the blood vessels closing.

5. Challenge: Why do you think the left atrium and left ventricle are shown on the *right* side of the diagram?

Noninvasive Vascular Diagnosis Ali F. AbuRahma, 2017-10-02 This large format book is the definitive text on vascular surgery written by expert editors and contributors. It is well supported by exceptional illustrative material. The book is invaluable to all those who work in vascular laboratories as well as internists, cardiologists, vascular laboratory directors, and staff general surgeons involved in vascular surgery and the vascular surgery community in general. Noninvasive Vascular Diagnosis comprehensively covers all aspects of noninvasive evaluation of the circulatory system in the extremities. The increasing popularity of noninvasive techniques is not reflected in the number of comprehensive works on the topic, and it is clear from the success of the first edition that the demand for an updated volume is increasing. **2025-26**

Atmosphere Tapio Schneider, Adam H. Sobel, 2022-12-13 Despite major advances in the observation and numerical simulation of the atmosphere, basic features of the Earth's climate remain poorly understood. Integrating the available data and computational resources to improve our understanding of the global circulation of the atmosphere remains a challenge. Theory must play a critical role in meeting this challenge. This book provides an authoritative summary of the state of the art on this front. Bringing together sixteen of the field's leading experts to address those aspects of the global circulation of the atmosphere most relevant to climate, the book brings the reader up to date on the key frontiers in general circulation theory, including the nonlinear and turbulent global scale dynamics that determine fundamental aspects of the Earth's climate. While emphasizing theory as expressed through relatively simple mathematical models, it also draws connections to simulations with comprehensive general circulation models. Topics include the dynamics of storm tracks, interactions between wave dynamics and the hydrological cycle, monsoons, tropical and extratropical dynamics and interactions, and the processes controlling atmospheric humidity. An essential resource for graduate students in atmospheric, ocean, and climate sciences, and for researchers seeking an overview of the field, *The Global Circulation of the Atmosphere* sets the standard for future research in a science that stands at a critical juncture. With a foreword by Edward Lorenz, the book includes chapters by Christopher Bretherton, Kerry Emanuel, Isaac Held, David Neelin, Raymond Pierrehumbert, Hélène Brogniez, and Romy Roca. Alan Plumb, Walter Robinson, Tapio Schneider, Richard Seager, and David Battisti. Adam Sobel, Kyle Swanson, and Pablo Zurita Gotor, and Richard Lindzen. **Photoacoustic and Photothermal Spectroscopy** Surya N. Thakur, Virendra N. Rai, Jagdish

Singh, 2022-12-07 Photoacoustic and Photothermal Spectroscopy: Principles and Applications introduces the basic principles, instrumentation, and major developments in the many applications of Photoacoustic and Photothermal Spectroscopy over the last three decades. The book explains the processes of sound generation by periodic optical excitation and ultrasonic generation by pulsed laser excitation and describes the workings of photoacoustic cells equipped with
