Standard Operating Guideline – (SOG)

Title: **MAINTENANCE MANAGEMENT SYSTEM**

District Name: _____

Date Prepared:_____ Date Revised:_____

OBJECTIVE:

A Maintenance Management System is an organized method of collecting documentation as it pertains to repair and rehabilitation work. The objective of this standard operating guideline is to give your organization ideas on how to develop and/or enhance your organization's maintenance management system.

RATIONALE / PURPOSE:

The purpose of this standard operating guideline is to promote the implementation of a comprehensive maintenance management system. Utilities usually keep some sort of record of repairs and rehabilitation work. A maintenance management system is a systematic method of recording these events so analysis can be performed on these records. This management system can be as simple as documenting maintenance on 5x8 cards, or as elaborate as a computerized maintenance management system interfaced with geographic information systems (GIS). The important part is that all maintenance activities (routine and non-routine), are documented in a system that can be analyzed at a later date. A maintenance management system along with a preventive and predictive maintenance program is essential to reducing overall operating costs, liability, and property losses.

An effective maintenance management system is essential to:

- Improving customer service
- Ensure mission capability
- Ensure firefighting capability
- Reduce liability and property losses
- Determine capital replacement budgeting
- Development of agency master plans
- Development of material standards
- Development of preventive and predictive maintenance programs
- Development of loss trend analysis
- Reduce revenue loss
