Michel, 2010-07-08 Life has many surprises One of the best surprises is meeting a caring mentor an encouraging collaborator or an enthusiastic friend This volume is a tribute to Professor Michael K Sain who is such a teacher colleague and friend On the beautiful fall day of October 27 2007 friends families colleagues and former students gathered at a workshop held in Notre Dame Indiana This workshop brought together many people whose lives have been touched by Mike to celebrate his milestone 70th birthday and to congratulate him on his contributions in the fields of systems controls and control Mike was born on March 22 1937 in St Louis Missouri After obtaining his B S E E and M S E E at St Louis University he went on to study at the University of Illinois at Urbana Champaign for his doctoral degree With his Ph D degree complete he came to the University of Notre Dame in 1965 as an assistant professor He became an associate professor in 1968 a full professor in 1972 and the Frank M Freimann Chair in Electrical Engineering in 1982 He has remained at and loved the University of Notre Dame for over 40 years Mike also held a number of consulting jobs throughout his career Most notably he consulted with the Energy Controls Division of Allied Bendix Aerospace from 1976 to 1988 and the North American Operations branch of the Research and Development Laboratory of General Motors Corporation for a decade 1984 1994

Integrated Process Design and Operational Optimization via Multiparametric Programming Baris Burnak, Nikolaos A. Diangelakis, Efstratios N. Pistikopoulos, 2022-06-01 This book presents a comprehensive optimization based theory and framework that exploits the synergistic interactions and tradeoffs between process design and operational decisions that span different time scales Conventional methods in the process industry often isolate decision making mechanisms with a hierarchical information flow to achieve tractable problems risking suboptimal even infeasible operations In this book foundations of a systematic model based strategy for simultaneous process design scheduling and control optimization is detailed to achieve reduced cost and improved energy consumption in process systems The material covered

in this book is well suited for the use of industrial practitioners academics and researchers In Chapter 1 a historical perspective on the milestones in model based design optimization techniques is presented along with an overview of the state of the art mathematical tools to solve the resulting complex problems Chapters 2 and 3 discuss two fundamental concepts that are essential for the reader These concepts are i mixed integer dynamic optimization problems and two algorithms to solve this class of optimization problems and ii developing a model based multiparametric programming model predictive control These tools are used to systematically evaluate the tradeoffs between different time scale decisions based on a single high fidelity model as demonstrated on i design and control ii scheduling and control and iii design scheduling and control problems We present illustrative examples on chemical processing units including continuous stirred tank reactors distillation columns and combined heat and power regeneration units along with discussions of other relevant work in the literature for each class of problems

Accordingly, the volume includes survey papers together with presentations of some recent results. The special emphasis is put on nonlinear systems, algebraic and geometric methods, optimal control and optimization, general problems, distributed parameter systems, linear systems, linear quadratic problem, robust stabilization. An important feature of the school and consequently of the volume was its really international character since it brought together leading control theorists from West and East. All together, the school was attended by 108 participants from 18 countries. During the school, 21 one-hour invited lectures were delivered. Moreover, five half-hour talks were given and 30 contributions were presented in frames of poster sessions. The school was organized and supported by the Institute of Mathematics of the Polish Academy of Sciences, Committee of Automatic Control and Robotics of the Polish Academy of Sciences, Institute of Automatic Control, Warsaw University of Technology as Co-ordinator of the Basic Research Program R P I 02 Theory of Control of Continuous Dynamic Systems and Discrete Processes.
