Werner Dankwort, 2012-12-06 Looking at modern industrial products one can recognize a variety of different complex shapes All these products are not only designed they are styled Everybody knows about the importance of styling if the product is a car but today even simple consumer appliances do not only have to fulfil their function they must also look nice In addition even purely technical products like turbines or valves are designed with very complex shapes to make them work more efficiently Thus optimising the shape of products is one of the key factors in the process chain of development Today there are various CAX systems which have evolved to be the basic tools for design calculation simulation and manufacturing in almost all kinds of industrial environments but the improvement of the product s shape is in most cases done manually on the physical model This break in the CAD information flow can be overcome with

REVERSE ENGINEERING techniques reconstructing the shape describing CAD surfaces Bezier NURBS surfaces or others from the modified physical model and Therefore the 2 Workshop on current CAX problems was dedicated to REVERSE ENGINEERING During the workshop were presented the newest research results of surface reconstruction for a given set of points the methods and tools for problems in Reverse Engineering of some of the most important CAD vendors Holometric Technology IBM Dassault ICEM Imageware Matra Data vision Tebis Additionally structural aspects in Reverse Engineering possible future developments and new research directions were discussed
