Visual Pollution Adriana Portella, 2016-02-11 In recent years there has been considerable interest in the problems that public spaces face because of the design of commercial signs The negative consequences that commercial signs can have on the visual quality of urban areas and further more on people s quality of life has been studied from both architectural planning and psychological perspectives While the issue of visual pollution as this phenomenon is commonly described has been widely debated there is as yet no clear conclusion as to how best to control commercial signage and whether different urban contexts and people from different backgrounds and cultures have universal or distinct preferences Several different commercial signage approaches are currently applied to different historic cities but these initiatives are not based on principles derived from the perception and evaluation of users Drawing on a range of comparative and contrasting empirical studies of historic city centres in the UK and Brazil this book examines questions of commercial signage control management the preservation of historic heritage and user preference and satisfaction The author takes an environment behaviour approach to this research involving theories concepts and methodologies related to environmental psychology architecture planning and urban design In doing so it argues that there are in fact visual preferences common to the majority of people independent of their urban context and that these common views can be useful to the development of a general theory of how to control commercial signage In conclusion the book suggests that the best way of controlling signage is not only to recommend general guidelines related to the operation of commercial signage but also to recommend design principles that can create commercial streetscapes evaluated positively by different users

The Routledge Companion to Twentieth and Early Twenty-First Century Urban Design Jon Lang, 2020-11-09 The Routledge Companion to Twentieth and Early Twenty First Century Urban Design is a fully illustrated descriptive and explanatory history of the development of urban design ideas and paradigms of the past 150 years The ideas and projects hypothetical and built range in scale from the city to the urban block level The focus is on where the generic ideas originated the projects that were designed following their precepts the functions they address and or afford and what we can learn from them The morphology of a city its built environment evolves unselfconsciously as private and governmental investors self consciously erect buildings and infrastructure in a pragmatic piecemeal manner to meet their own ends Philosophers

novelists architects and social scientists have produced myriad ideas about the nature of the built environment that they consider to be superior to those forms resulting from a laissez faire attitude to urban development Rationalist theorists dream of ideal futures based on assumptions about what is good empiricists draw inspirations from what they perceive to be working well in existing situations Both groups have presented their advocacies in manifestoes and often in the form of generic solutions or illustrative designs This book traces the history of these ideas and will become a standard reference for scholars and students interested in the history of urban spaces including architects planners urban historians urban geographers and urban morphologists **Action, Property and Beauty** Stefano Cozzolino, Stefano Moroni, 2024-08-12
