Cases on Enhancing P-16 Student Engagement With Digital Technologies Gierhart, Aaron R., 2024-12-27 Reimagining how digital technologies are integrated into education is crucial for fostering active and meaningful student engagement. Traditional knowledge-centric approaches often overlook the dynamic processes students use to interact with and apply technology in their learning. By focusing on how students actively engage with digital tools to meet academic and developmental goals, educators can create richer, more effective learning experiences. This shift not only enhances academic outcomes but also prepares students with the critical skills needed to navigate and contribute to an increasingly digital world. *Cases on Enhancing P-16 Student Engagement With Digital Technologies* features cases of teaching and learning with digital technologies in P-16 educational settings, focusing specifically on what learners do with technology. It shares cases of teaching in which technologies are leveraged in student-centered ways that transform learning and allow students to engage in authentic, meaningful learning experiences. Covering topics such as artificial intelligence, AI, immersive learning experiences, and traditional learning, this book is an excellent resource for P-16 educators, leaders, stakeholders, policymakers, and more.

Assessing the Impact of Computer-Based Instruction Margaret D. Roblyer, William Castine, F. J. King, 1988-11-16 Can computer applications help improve student performance? For what skills, grade levels, content areas, and type of students are computer applications most effective? Can computer applications improve student attitude toward school and decrease drop-out rates? Discover what the research reveals in this provocative new book about these and other crucial questions concerning the impact of computer-based instruction. *Assessing the Impact of Computer-Based Instruction* provides the most comprehensive and up-to-date summary available on the effects of computer applications on both student achievement and attitudes. Teaching Economics Joshua Hall, Kerianne Lawson, 2019-08-07 This book looks at a number of topics in economic education, presenting multiple perspectives from those in the field to anyone interested in teaching economics. Using anecdotes, classroom experiments, and surveys, the contributing authors show that with some different or new techniques, teaching economics can be more engaging for students and help them better retain what they learned. Chapters cover a wide range of approaches to teaching economics, from interactive approaches such as utilizing video games and *Econ Beats* to more rigorous examinations of government policies, market outcomes, and exploring case studies from specific courses. Many of the chapters incorporate game theory and provide worked-out examples of games designed to help students with intuitive retention of the material, and these games can be

unified treatment of quantitative psychology The SAGE Handbook of Quantitative Methods in Psychology does just that Each chapter covers a methodological topic with equal attention paid to established theory and the challenges facing methodologists as they address new research questions using that particular methodology The reader will come away from each chapter with a greater understanding of the methodology being addressed as well as an understanding of the directions for future developments within that methodological area Drawing on a global scholarship the Handbook is divided into seven parts Part One Design and Inference addresses issues in the inference of causal relations from experimental and non experimental research along with the design of true experiments and quasi experiments and the problem of missing data due to various influences such as attrition or non compliance Part Two Measurement Theory begins with a chapter on classical test theory followed by the common factor analysis model as a model for psychological measurement The models for continuous latent variables in item response theory are covered next followed by a chapter on discrete latent variable models as represented in latent class analysis Part Three Scaling Methods covers metric and non metric scaling methods as developed in multidimensional scaling followed by consideration of the scaling of discrete measures as found in dual scaling and correspondence analysis Models for preference data such as those found in random utility theory are covered next Part Four Data Analysis includes chapters on regression models categorical data analysis multilevel or hierarchical models resampling methods robust data analysis meta analysis Bayesian data analysis and cluster analysis Part Five Structural Equation Models addresses topics in general structural equation modeling nonlinear structural equation models mixture models and multilevel structural equation models Part Six Longitudinal Models covers the analysis of longitudinal data via mixed modeling time series analysis and event history analysis Part Seven Specialized Models covers specific topics including the analysis of neuro imaging data and functional data analysis

Grinnell,Peter Gabor (Sociologist),Yvonne A. Unrau,2016 First published in 1994 this text is designed to be used by graduate level social work students in courses on evaluation and program design Over the course of 20 years and 6 editions the goals

of the book have remained the same to prepare students to participate in evaluative activities within their organizations to prepare students to become critical producers and consumers of professional evaluative literature and to prepare students for more advanced evaluation courses and texts Grinnell Gabor and Unrau aim to meet these objectives by presenting a unique approach that is realistic practical applied and user friendly While a majority of textbooks focus on program level evaluation some recent books present case level evaluation methods but rely on inferentially powerful but difficult to implement experimental baseline designs This text assumes that neither of these approaches adequately reflects the realities of the field or the needs of students and beginning practitioners Instead Program Evaluation for Social Workers offers a blend of the two that demonstrates how they can complement one another The integration of case level and program level approaches provides an accessible adaptable and realistic framework for students to more easily grasp and implement in the real world
