

INTERNATIONAL ECONOMICS

International economics, in simple terms, is the study of how countries trade and interact economically with each other. It is the toughest branch of economics due to relationship complexity between two countries. International economics is a field of study that looks at how different countries trade and interact with each other economically. Here's what it means in simple terms, along with some definitions by various economists and a brief look at its history. International economics is like studying how people from different countries buy and sell things with each other. It's about understanding why countries trade, how they benefit from it, and what problems they face. This field helps us see how taxes, rules, and the value of money affect a country's economy. It's about how countries work together to trade stuff and how that affects their money, jobs, and the things we buy.

Historical Evolution:

International economics has been around for a long time. In the past, it was mainly about trade in physical goods like spices and silk. But over time, it expanded to include services, finance, and investments. It became more complex as countries developed and started using different money (currencies). Today, it's a big part of how our global economy works, affecting everything from the price of electronics to the jobs people have.

Bertil Ohlin, a Swedish economist, and classical economists have different ideas about whether trade within a country and trade between countries are alike or not. They point out four main differences:

1. Market Diversity:

- **Ohlin:** Ohlin thinks that both types of trade can have diverse markets because they involve different people, skills, and resources within a country or between countries.
- **Classical Economists:** They say that internal trade tends to involve more similar things because it's within one country, while international trade has more variety because it's between different countries.

2. Currency:

- **Ohlin:** Ohlin says there's a difference because international trade often uses different types of money, which can make things more complicated with changing exchange rates.
- **Classical Economists:** They argue that internal trade usually uses just one type of money (like the dollar), which is simpler, while international trade has to deal with various currencies, which can be more complex.

3. Different Political Rules:

- **Ohlin:** Ohlin points out that international trade happens between different countries with different rules and laws, which makes it special.
- **Classical Economists:** They note that internal trade occurs within one country, so the rules and laws are usually the same, whereas international trade crosses borders and faces different legal systems.

4. Resource Mobility:

- **Ohlin:** Ohlin thinks that resources like workers and money can move differently in internal and international trade, affecting how things are made.
- **Classical Economists:** They suggest that in internal trade, resources like workers and money can move around more easily within a country, but in international trade, there may be more restrictions and differences when they cross borders.

In summary, Bertil Ohlin and classical economists don't agree on whether internal and international trade are similar or different. Ohlin sees some differences in terms of market diversity, currency complexity, different political rules, and how resources move, while classical economists tend to focus on the distinctions between the two types of trade based on these factors.
