Methodologies and Approaches Rasiah Logananthara, Günther Palm, Moonis Ali, 2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or

changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area

Mechatronics '98 J. Adolfsson, J. Karlsén, De Montfort University, 1998-08-28 Mechatronics a synergistic combination of mechanical electronic and computing engineering technologies is a truly multidisciplinary approach to engineering New products based on mechatronic principles are demonstrating reduced mechanical complexity increased performance and often previously impossible capabilities This book contains the papers presented at the UK Mechatronics Forum s 6th International Conference held in Skövde Sweden in September 1998 Many of these high quality papers illustrate the tremendous influence of mechatronics on such areas as manufacturing machinery automotive engineering textiles manufacture robotics and real time control and vision systems There are also papers describing developments in sensors actuators control and data processing techniques such as fuzzy logic and neural networks all of which have practical application to mechatronic systems

Practical Applications of Computational Intelligence Techniques Lakhmi Jain, Philippe De Wilde, 2012-12-06 Computational intelligence paradigms have attracted the growing interest of researchers scientists engineers and application engineers in a number of everyday applications These applications are not limited to any particular field and include engineering business banking and consumer electronics Computational intelligence paradigms include artificial intelligence artificial neural networks fuzzy systems and evolutionary computing Artificial neural networks can mimic the biological information processing mechanism in a very limited sense Evolutionary computing algorithms are used for optimisation applications and fuzzy logic provides a basis for representing uncertain and imprecise knowledge Practical Applications of Computational Intelligence Techniques contains twelve chapters providing actual application of these techniques in the real world Such examples include but are not limited to intelligent household appliances aerial spray models industrial applications and medical diagnostics and practice This book will be useful to researchers practicing engineers scientists and students who are interested in developing practical applications in a computational intelligence environment
