consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics. Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses. TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs.

Preface to the Second Edition This book covers those topics necessary for a clear understanding of the qualitative theory of ordinary differential equations and the concept of a dynamical system. It is written for advanced undergraduates and for beginning graduate students. It begins with a study of linear systems of ordinary differential equations, a topic already familiar to the student who has completed a first course in differential equations.

Kant and Philosophy of Science Today Michela Massimi, 2008-11-20 There has been an increasing interest in Kant and philosophy of science in the past twenty years. Through reconstructing Kantian legacies in the development of nineteenth and twentieth century physics and mathematics, this volume explores what relevance Kant's philosophy has in current debates in philosophy of science, mathematics, and physics.

Circular Dichroism and the Conformational Analysis of Biomolecules G.D. Fasman, 2013-11-11 Excellent and very timely. It will undoubtedly become a standard reference for the application of circular dichroism (CD) to biomolecules. Quarterly Review of Biology, March 1997. The testament to the book's utility is the fact that during the course of my review I had to rescue it from the desks of graduate students on an almost daily basis. In summary, this is a great book. American Scientist. Well documented chapters provide a very good insight into the problems surrounding the conformation of biomacromolecules. An indispensable source of information. Nahrung 42:2, 1998. Renowned experts present the first state-of-the-art description of circular dichroism spectroscopy (CD). Chapters present in-depth discussions of the history of the field, the theory of CD for application to globular proteins, membrane proteins, peptides, nucleic acids, and their interactions, carbohydrates, and instrumentation. Discussions also feature new techniques using synchrotron radiation, vibrational Raman, optical activity, and vibrational CD. More than 250 illustrations supplement the text.
