Function

Oil level and oil quality are detected on the basis of the experience of the engine oil (deterioration). The oil temperature is detected by the temperature sensor. All the signals are processed in the electronics to form a PPM signal and transmitted to the engine control unit. The data is present in the engine control unit via CAN to the instrument cluster and used there to calculate the individual service intervals. Oil top-ups are automatically recognized and extend the service interval. The data can be displayed on the instrument cluster. Overfilling of engine oil, minor damages, overheating of engine oil and too frequent oil change are automatically displayed.
