Wa Morel Mushroom Report:

General Technical Report PNW-GTR, 2005 *Ecology and Management of Morels Harvested from the Forests of Western North America*, 2007 Morels are prized edible mushrooms that fruit sometimes prolifically in many forest types throughout western North America They are collected for personal consumption and commercially harvested as valuable special nontimber forest products Large gaps remain however in our knowledge about their taxonomy biology ecology cultivation safety and how to manage forests and harvesting activities to conserve morel populations and ensure sustainable crops This publication provides forest managers policymakers mycologists and mushroom harvesters with a synthesis of current knowledge regarding these issues regional summaries of morel harvesting and management and a comprehensive review of the literature

General Technical Report PNW., 1978 *Report of the Commissioner of Agriculture of the Operations of the Department for the Year 1876* Washington Government Printing Office, 1877 *Commercial Morel Harvesters and Buyers in Western Montana* Rebecca Jean McLain, 2005 This exploratory study examined aspects of the social organization of the commercial wild morel industry in western Montana during 2001 We talked with 18 key informants 7 buyers and 11 pickers and observed social interactions at one buying station near the Kootenai National Forest and three buying stations near the Bitterroot National Forest The key informant and observational data permitted us to construct a picture of social interactions at field buying stations buyer strategies for attracting pickers changes in prices over the course of a season and the ways in which various participants in the wild morel harvest construct their livelihoods In the discussion we contrast our findings with the results of a recently published study on nontimber forest product harvesters in the Eastern United States We end the report with a discussion of management implications for managers and scientists

Nontimber Forest Products in the United States Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America's forests Once seen primarily as stands of timber our woodlands are now prized as a rich source of a wide range of commodities from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized Now as timber harvesting becomes more mechanized and requires less labor the image of the lumberjack is being replaced by that of the forager This book provides the first comprehensive examination of nontimber forest products NTFPs in the United States illustrating their diverse importance describing the people who harvest them and outlining the steps that are being taken to ensure access to them As the first extensive national overview of NTFP policy and management specific to the United States it brings together research from numerous disciplines and analytical perspectives such as economics mycology history ecology law entomology forestry geography and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products an overview of uses and users and discussions of sustainable management issues associated with ecology cultural traditions forest policy and commerce They examine some of the major

social economic and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape from the Pacific Northwest to the Caribbean From honey production to a review of nontimber forest economies still active in the United States such as the Ojibway harvest of plants recounted here the book takes in the whole breadth of recent NTFP issues including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands No other volume offers such a comprehensive overview of NTFPs in North America By examining all aspects of these products it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also protecting the future of our forests

Mushrooms traded as food. Vol II sec 2 Jørn Gry,Christer Andersson,2014-07-11 Mushrooms recognised as edible have been collected and cultivated for many years In the Nordic countries the interest for eating mushrooms has increased In order to ensure that Nordic consumers will be supplied with safe and well characterised edible mushrooms on the market this publication aims at providing tools for the in house control of actors producing and trading mushroom products The report is divided into two volumes a Volume I Mushrooms traded as food Nordic questionnaire and guidance list for edible mushrooms suitable for commercial marketing b Volume II Background information with general information in section 1 and in section 2 risk assessments of more than 100 mushroom species All mushrooms on the lists have been risk assessed regarding their safe use as food in particular focusing on their potential content of bioactive constituents

Biology, Ecology, and Social Aspects of Wild Edible Mushrooms in the Forests of the Pacific Northwest R. Molina,1993

Compatible Forest Management Robert A. Monserud,Richard W. Haynes,Adelaide C. Johnson,2013-04-17 Public debate has stimulated interest in finding greater compatibility among forest management regimes The debate has often portrayed management choices as tradeoffs between biophysical and socioeconomic components of ecosystems Here we focus on specific management strategies and emphasize broad goals such as biodiversity wood production and habitat conservation while maintaining other values from forestlands desired by the public We examine the following proposition Commodity production timber nontimber forest products and the other forest values biodiversity fish and wildlife habitat can be simultaneously produced from the same area in a socially acceptable manner Based on recent research in the Pacific Northwest we show there are alternatives for managing forest ecosystems that avoid the divisive arena of either or choices Much of the work discussed in this book addresses two aspects of the compatibility issue First how are various forest management practices related to an array of associated goods and services Second how do different approaches to forest management affect relatively large and complex ecosystems

USITC Publication ,1982 **Mushrooms in Forests and Woodlands** Anthony B. Cunningham, Xuefei Yang, 2012-06-25 Many mushrooms or the fruits of fungi are extremely valuable wild gathered products which are utilised for both their medicinal properties and as food In many of the world s tropical and temperate forests they are the primary source of income for the people who live there These forests range from temperate woodlands and small forests to high altitude forests in the Himalaya and tropical miombo woodlands in south central Africa In south west China over 200 species of wild fungi in 64 genera are commercially traded while in Europe and North America woodlands and small forests are the source of many highly prized mushrooms and an essential resource for many small enterprises and collectors Yet the increased demand for timber has resulted in the rapid expansion of forestry which in turn has destroyed the natural habitat of many fungi unbalancing both forest economics and ecology Despite the economic social and cultural values of fungi there is a general lack of understanding of their importance to local livelihoods and forest ecology This book aims to fill this gap and extends the People and Plants Conservation Series beyond the plant kingdom into the related world of fungi and mushrooms It demonstrates the crucial roles that fungi play in maintaining forest ecosystems and the livelihoods of rural people throughout the world while providing good practice guidelines for the sustainable management of this resource and an assessment of economic value It brings together the perspectives of biologists anthropologists and forest and woodland managers to provide a unique inter disciplinary and international overview of the key issues **Research Note PNW** ,2005
