Feyerabend's Epistemological Anarchism Mansoor Niaz, 2020-01-27 This book

argues that the traditional image of Feyerabend is erroneous and that contrary to common belief he was a great admirer of science. It shows how Feyerabend presented a vision of science that represented how science really works. Besides giving a theoretical framework based on Feyerabend's philosophy of science, the book offers criteria that can help readers to evaluate and understand research reported in important international science education journals with respect to Feyerabend's epistemological anarchism. The book includes an evaluation of general chemistry and physics textbooks. Most science curricula and textbooks provide the following advice to students: Do not allow theories in contradiction with observations and all scientific theories must be formulated inductively based on experimental facts. Feyerabend questioned this widely prevalent premise of science education in most parts of the world and in contrast gave the following advice: Scientists can accept a hypothesis despite experimental evidence to the contrary and scientific theories are not always consistent with all the experimental data. No wonder Feyerabend became a controversial philosopher and was considered to be against rationalism and anti-science. Recent research in philosophy of science, however, has shown that most of Feyerabend's philosophical ideas are in agreement with recent trends in the 21st century. Of the 120 articles from science education journals evaluated in this book, only 9% recognized that Feyerabend was presenting a plurality of perspectives based on how science really works. Furthermore, it has been shown that Feyerabend could even be considered as a perspectival realist. Among other aspects, Feyerabend emphasized that in order to look for breakthroughs in science, one does not have to be complacent about the truth of the theories but rather has to look for opportunities to break rules or violate categories. Mansoor Niaz carefully analyses references to Feyerabend in the literature and displays the importance of Feyerabend's philosophy in analyzing historical episodes. Niaz shows through this remarkable book a deep understanding to the essence of science. Calvin Kalman, Concordia University, Canada. In this book, Mansoor Niaz explores the antecedents, context, and features of Feyerabend's work and offers a more nuanced understanding than reviews and considers its reception in the science education and philosophy of science literature. This is a valuable contribution to scholarship about Feyerabend with the potential to inform further research as well as science education practice. David Geelan, Griffith University, Australia.

Fundamentals of Nanotechnology Gabor L. Hornyak, John J. Moore, H.F. Tibbals, Joydeep Dutta, 2018-12-14 WINNER 2009 CHOICE AWARD OUTSTANDING ACADEMIC TITLE. Nanotechnology is no longer a subdiscipline of chemistry, engineering, or any other field. It represents the convergence of many fields and therefore demands a new paradigm for teaching. This textbook is for the next generation of nanotechnologists. It surveys the field's broad landscape, exploring the physical basics such as nanorheology, nanofluidics, and nanomechanics, as well as industrial concerns such as manufacturing reliability and safety. The authors then explore the vast range of nanomaterials and systematically outline devices and applications in various industrial sectors. This color text is an ideal companion to *Introduction to Nanoscience* by the same group of esteemed authors. Both titles are also available as the single volume *Introduction to Nanoscience and Nanotechnology*.

Qualifying instructors who purchase either of these volumes or the combined set are given online access to a wealth of instructional materials These include detailed lecture notes review summaries slides exercises and more The authors provide enough material for both one and two semester courses

High Energy Laser (Hel) Bahman Zohuri, 2014-11-22 Directed Energy Weapons is nothing new to mankind historically the origination of such weapons falls in centuries ago when first time the famous Greek mathematician physicist engineer inventor and astronomer Archimedes of Syracuse used different mirrors to collect sunbeams and focusing them on Romans fleet in order to destroy enemy ships with fire This is known as the Archimedes Heat Ray Archimedes may have used mirrors acting collectively as a parabolic reflector to burn ships attacking Syracuse The device was used to focus sunlight onto approaching ships causing them to catch fire Of course the myth or reality of Archimedes Heat Ray still is a questionable story but certain experiments with the help of a group of students from Massachusetts Institute of Technology was carried out with 127 one foot 30 cm square mirror tiles in October of 2005 that was focused on a mock up wooden ship at a range of around 100 feet 30 m The flames broke out on a patch of the ship but only after the sky had been cloudless and the ship had remained stationary for around ten minutes It was concluded the device was a feasible weapon under these conditions
