

Q 2.1) Two charges $5 \times 10^{-8} \text{ C}$ and $-3 \times 10^{-8} \text{ C}$ are located 16 cm apart from each other. At what point (s) on the line joining the two charges is the electric potential zero? Take the potential at infinity to be zero.

Solution:

Given,

$$q_1 = 5 \times 10^{-8} \text{ C}$$

$$q_2 = -3 \times 10^{-8} \text{ C}$$

The two charges are at a distance, $d = 16\text{cm} = 0.16\text{m}$ from each other.

Let us consider a point "P" over the line joining charges q_1 and q_2 .

Let the distance of the considered point P from q_1 be 'r'

Let us consider point P to have zero electric potential (V)...

The electric potential at point P is the summation of potentials due to charges q_1 and q_2 .

$$\text{Therefore, } V = \frac{1}{4\pi\epsilon_0} \cdot \frac{q_1}{r} + \frac{1}{4\pi\epsilon_0} \cdot \frac{q_2}{d-r} \dots\dots\dots(1)$$

Here,

ϵ_0 = permittivity of free space.

Putting $V = 0$, in eqn. (1), we get,

$$0 = \frac{1}{4\pi\epsilon_0} \cdot \frac{q_1}{r} + \frac{1}{4\pi\epsilon_0} \cdot \frac{q_2}{d-r}$$

$$\frac{1}{4\pi\epsilon_0} \cdot \frac{q_1}{r} = - \frac{1}{4\pi\epsilon_0} \cdot \frac{q_2}{d-r}$$

$$\frac{q_1}{r} = - \frac{q_2}{d-r}$$

$$\frac{5 \times 10^{-8}}{r} = - \frac{(-3 \times 10^{-8})}{0.16-r}$$

$$5(0.16 - r) = 3r$$

$$0.8 = 8r$$

$$r = 0.1\text{m} = 10 \text{ cm.}$$

Therefore, at a distance of 10 cm from the positive charge, the potential is zero between the two charges.

Let us assume a point P at a distance 's' from the negative charge be outside the system, having potential zero.

So, for the above condition, the potential is given by –

Handbook of Gasification Technology James G. Speight, 2020-04-14 Gasification is one of the most important advancements that has ever occurred in energy production. Using this technology, for example, coal can be gasified into a product that has roughly half the carbon footprint of coal. On a large scale, gasification could be considered a revolutionary development, not only prolonging the life of carbon-based fuels but making them greener and cleaner. As long as much of the world still depends on fossil fuels, gasification will be an environmentally friendlier choice for energy production. But gasification is not just used for fossil fuels. Waste products that would normally be dumped into landfills or otherwise disposed of can be converted into energy through the process of gasification. The same is true of biofeedstocks and other types of feedstocks, thus making another argument for the widespread use of gasification. The Handbook of Gasification Technology covers all aspects of the gasification in a one-stop shop, from the basic science of gasification and why it is needed to the energy sources, processes, chemicals, materials, and machinery used in the technology. Whether a veteran engineer or scientist using it as a reference or a professor using it as a textbook, this outstanding new volume is a must-have for any library.

Sampling and Sample Preparation in Field and Laboratory Janusz Pawliszyn, 2002-09-09 This title is the first comprehensive book on sampling and modern sample preparation techniques and has several main objectives: to facilitate recognition of sample preparation as both an integral part of the analytical process; to present a fundamental basis and unified theoretical approach for the professional development of sample preparation; to emphasize new developments in sample preparation technology; and to highlight the future impact of sample preparation on new directions in analytical science, particularly automation, miniaturization, and field implementation. Until recently, there has been relatively little scientific interest in sampling and sample preparation, however, this situation is presently changing as sampling and sample preparation become integral parts of the analytical process with their own unique challenges and research opportunities. Sampling and Sample Preparation for Field and Laboratory is an essential resource for all analytical chemists, and in particular, those involved in method development. Not only does it cover the fundamental aspects of extraction, it also covers applications in various matrices and includes sampling strategies and equipment and how these can be integrated into the analytical process for maximum efficiency.
